PeopleSoft Selective Adoption at COLLABORATE 16

PeopleSoft's Selective Adoption is more than just a new set of tools for the delivery of software updates. It represents a new delivery paradigm in which Oracle delivers frequent maintenance updates and new features to its PeopleSoft customers. To be successful, customers need to fully understand the continuous delivery model, and then create a comprehensive adoption and deployment strategy for their organizations.

The strategic issues

- How will the selective adoption model bring value to the line of business?
- What is your company's approach to customizations?
- How does your company manage risk and organization change?
- What changes will your organization need to implement to take advantage of the new delivery model?

The business issues

- How it can serve as a tool for better collaboration between IT and your business stakeholders?
- How can your organization adapt from the "upgrade-once-every-several-years" approach to a frequent or continuous adoption model?
- What are the scheduling and testing needs for a continuous adoption model?

The technical tools

- Cumulative Feature Overview (CFO)
- PeopleSoft Update Image (PI)
- PeopleSoft Update Manager (PUM)
- Change Assistant (CA)
- PeopleSoft Test Framework (PTF)

Learn
