## 1 Week To NC Republican Presidential Primary, Before Results from Michigan are Known, Trump Atop Cruz; Ross Atop Rey in Democratic Senate Primary; Burr, McCrory, Cooper Positioned for Statewide Primary Wins:

Ted Cruz may be closing in on Donald Trump in North Carolina, in the Republican primary for President of the United States, according to the latest poll commissioned by WRAL-TV in Raleigh. During the first half of interviewing for this survey, before the results of the 03/05/16 Kansas, Maine, Kentucky, and Louisiana Republican contests were known, Cruz polled at 23%. After news of Cruz's strong Saturday showing had been digested, Cruz polled at 33%. During the same period, Trump's support softened ever-so-slightly, from 42% to 39%. Rubio's support declined from 16% to 11% and John Kasich's support crept 3 points higher.

When data from all 4 days of interviewing is integrated, the results at this hour are:

\* Trump 41%, Cruz 27%, Marco Rubio 14%, and John Kasich 11%.

Trump led Cruz by 19 points during the first 2 days of interviewing. Trump led Cruz by 6 points during the last 2 days of interviewing.

Results of next week's North Carolina presidential voting may be influenced by today's 03/08/16 Michigan and Mississippi primaries. Should Trump perform worse than expected in Michigan, that may cast doubt on his inevitability. Should Rubio perform worse than expected in Michigan, that may increase the calls for him to exit the race. Should Cruz surprise in Michigan, that may make him an acceptable Trump alternative to some Republican primary voters who have not yet returned a ballot in the Tarheel State.

At this hour, among voters who say they are a member of the Tea Party, Cruz edges Trump, 42% to 40%. Among NC evangelicals, which should be Cruz's strong suit, Trump prevails 42% to 31%. Among "very conservative" Republican primary voters, Trump and Cruz are bunched, 39% to 37%. Among "moderates," Rubio moves into 2nd place behind Trump, Kasich moves into 3rd place, and Cruz falls to 4th. Trump leads in all 4 regions of the state. Cruz runs 2nd in all 4 regions of the state. Trump leads Cruz by 19 points among those with a high school education. Trump leads Cruz by 23 points among primary voters earning less than \$40,000 a year. The contest is closer among college educated voters, where Cruz draws to within 5 points of Trump.

Trump leads by 7 among pro-life primary voters and leads by 32 points among pro-choice primary voters. Trump leads by 24 points among those who almost never attend church. Trump leads by just 5 points among those who attend church regularly.

In a Democratic Primary for President today, Hillary Clinton defeats Bernie Sanders 57% to 34%. Sanders' support is young; he leads Clinton nearly 2:1 among those 18 to 34. But among seniors, Clinton buries Sanders by nearly 4:1. Clinton leads by 8 points among white Democrats, and leads by 54 points among black Democrats. Momentum is with Clinton. During the first half of the field period, Clinton led Sanders by 12. During the 2nd half of the field period, Clinton led Sanders by 46 points. About 1/6th of the interviews for this survey were completed after the 03/06/16 CNN Democratic Presidential Debate in Flint MI.

In a Republican primary today for US Senator from North Carolina, incumbent Richard Burr defeats Greg Brannon 3:1. Burr polls above 40% in every region of the state. 27% of likely Republican primary voters say they are undecided, even though voting is well underway.

In a Democratic primary today for US Senator, Deborah Ross leads her nearest challenger, Chris Rey, by 25 points. 44% of likely Democratic primary voters remain undecided in this contest, so any outcome is conceivably possible. Among those Democrats who have decided, Ross leads materially among both whites and blacks. Ross's support is strongest in greater Raleigh, weakest in Southern and Coastal Carolina. Rey challenges Ross among primary voters with a high school education, but Ross distances herself, with a 5:1 advantage, among college educated primary voters.

In a Republican primary for NC Governor today, incumbent Pat McCrory sails to an easy win. In a Democratic primary for Governor, Roy Cooper is well positioned to defeat Ken Spaulding, though 30% of likely Democratic primary voters say they are undecided in the contest.

**16** Charlotte recently approved an ordinance allowing transgender men and women to use public bathrooms corresponding to the gender with which they identify. Should state lawmakers override the ordinance? Should state lawmakers order Charlotte to place the issue in front of voters as a referendum? Or should state lawmakers leave the ordinance alone?

**Statement of Methodology:** SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. SurveyUSA assigns to each question within the instrument a theoretical margin of sampling error, but such error is useful only in theory. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCP). Questions about SurveyUSA research can be addressed to [editor@surveyusa.com](mailto:editor@surveyusa.com).
