We help industry power ahead

For over 70 years, RR Fisher has helped industry move forward with enduring peace of mind. Our range of power transmission, conveyor, and vibratory products ensures machinery works to peak efficiency across a wide range of demanding environments.

Now with a head office in Palmerston North and branches in Auckland, Christchurch, and Sydney, we can efficiently serve and supply a wide range of customers across both countries.

With products serving bulk handling, food processing, mining, and manufacturing automation, we will continue to move with the times, improving our processes and increasing our range to deliver the best results for New Zealand and Australian manufacturers.

How to order

0800 235 877

sales@rrfisher.co.nz

Use our easy order form inside the back cover of this catalogue

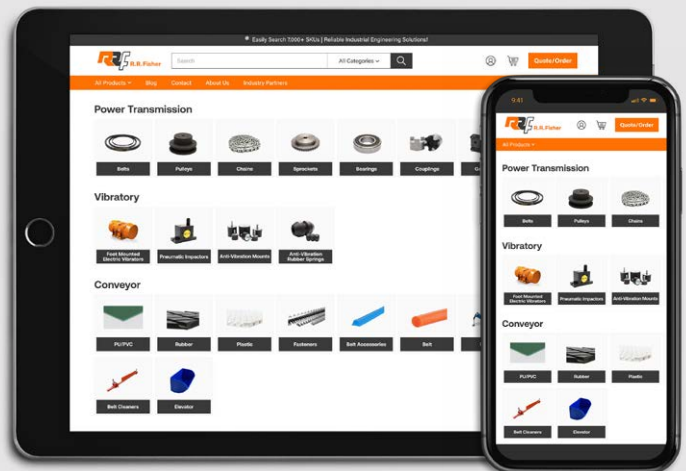

Same Day Dispatch

Order before 4pm for same day dispatch on all stocked items.

Freight will be charged on all orders.

Streamline your ordering with our new website today.

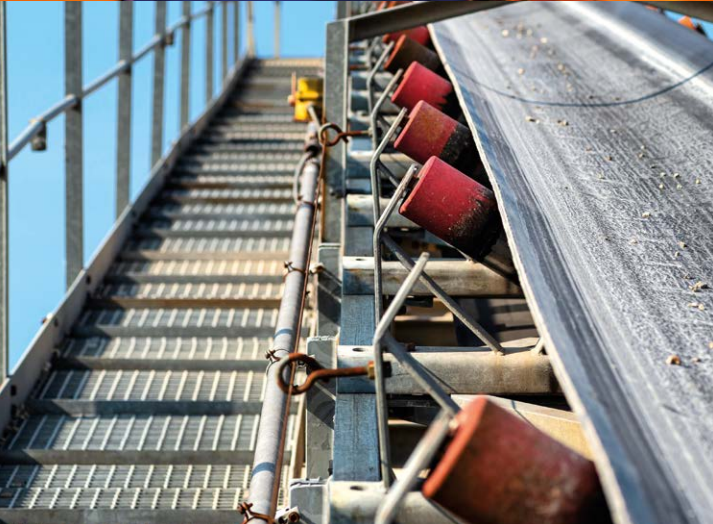

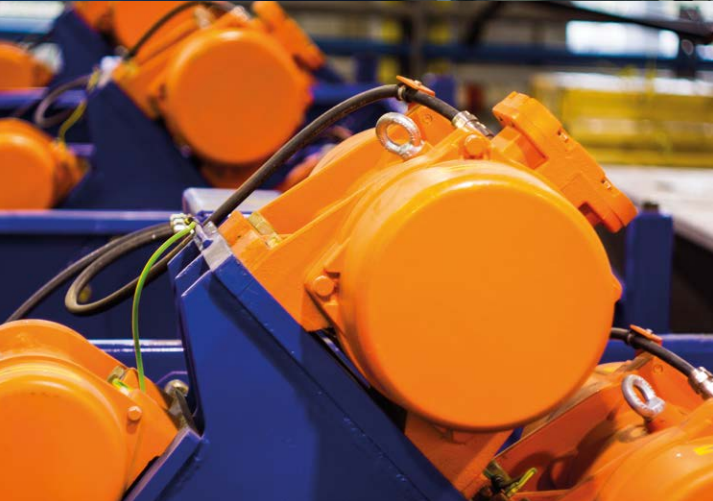

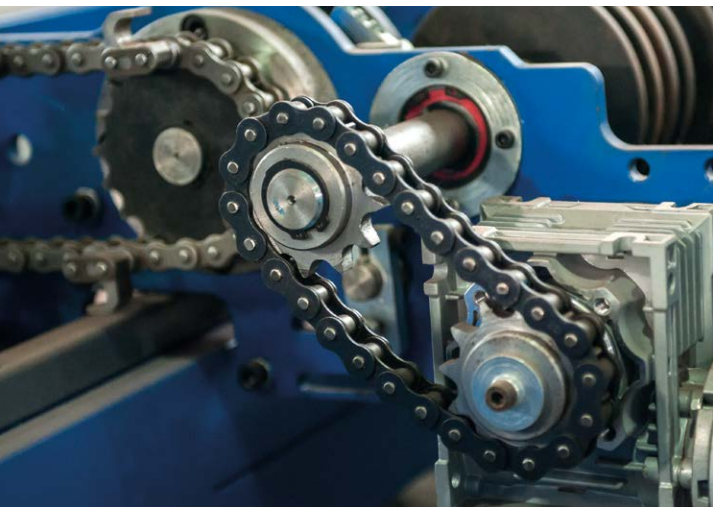

Our site provides you with a secure way to pay and our checkout process is incredibly easy and straightforward.

Adding your Purchase Order Number is easy, and you will receive notifications when your order is being processed, shipped and delivered.

Wrapped Classical V Belts

M Section (Z)

The M Section (Z) wrapped classical V-belt (width: 10mm, depth: 6mm) offers high-temperature and oil resistance, along with antistatic properties. It delivers excellent power transmission for multiple drives and high-torque applications in industrial and automotive machinery. With superior length stability and uniform performance, this belt ensures reliable operation in diverse environments.

Wrapped Classical V Belts
 C Section

The C Section wrapped classical V-belt (width: 22mm, depth: 14mm) offers high-temperature and oil resistance, along with antistatic properties. It delivers excellent power transmission for multiple drives and high-torque applications in industrial and automotive machinery. With superior length stability and uniform performance, this belt ensures reliable operation in diverse environments.

Heavy Duty Classical V Belts HA Section

The HA section heavy-duty Kevlar V-belt (width: 13mm, depth: 8mm) provides enhanced strength with high-temperature, oil-resistant, and antistatic properties. Engineered for demanding applications with small pulleys and reverse band idlers, it ensures exceptional durability and power transmission in agricultural and industrial machinery.

Heavy Duty Classical V Belts HC Section

The HC section heavy-duty Kevlar V-belt (width: 22mm, depth: 14mm) provides enhanced strength with high-temperature, oil-resistant, and antistatic properties. Engineered for demanding applications with small pulleys and reverse band idlers, it ensures exceptional durability and power transmission in agricultural and industrial machinery.

Wrapped Wedged Belts
SPZ (3V) Section

The wrapped wedge V-belt SPZ (3V) is designed for high-speed drives in industrial and agricultural machinery. It's narrow profile allows for pulley widths up to 50% smaller than classical belts, enabling compact drive designs. Compatible with universal pulleys, it offers improved power transmission and extended belt life, making it a reliable upgrade for most existing drives.

Wrapped Wedged Belts

SPA Section

The wrapped wedge V-belt SPA is designed for high-speed drives in industrial and agricultural machinery. Its narrow profile allows for pulley widths up to 50% smaller than classical belts, enabling compact drive designs. Compatible with universal pulleys, it offers improved power transmission and extended belt life, making it a reliable upgrade for most existing drives.

Raw Edge Cogged Wedge Belts 3VX (XPZ) Section

The cogged wrapped wedge V-belt combines the compact, high-speed benefits of a wedge profile with the added flexibility of cogs. This design allows for cooler operation, improved grip in pulley grooves, and enhanced power transmission. Ideal for industrial and agricultural machinery, it provides extended belt life and reliable performance, especially in compact, high-speed drive systems.

Raw Edge Cogged Wedge Belts 5VX (XPB) Section

The cogged wrapped wedge V-belt combines the compact, high-speed benefits of a wedge profile with the added flexibility of cogs. This design allows for cooler operation, improved grip in pulley grooves, and enhanced power transmission. Ideal for industrial and agricultural machinery, it provides extended belt life and reliable performance, especially in compact, high-speed drive systems.

Powered V Belts 67 Section

The Powered 67 V-belt, with a bareback band ply, is optimised for clutching drives and backside idlers. It delivers higher horsepower than conventional light-duty belts and resists extreme temperatures, humidity, and oil. Reinforced with aramid fibre cords, it provides superior shock load capability, ideal for applications like mowers and snow blowers. Look for the distinctive green cover.

Banded V Belts

The banded V-belt is ideal for shock load applications, including pulsating loads, high-capacity, and short-centre drives. With reinforced backing fabric joining the ribs, it reduces belt whip, turnover, and misalignment, ensuring stability under vibration and heavy-duty conditions.

Banded V Belts (Continued)

The banded V-belt is ideal for shock load applications, including pulsating loads, high-capacity, and short-centre drives. With reinforced backing fabric joining the ribs, it reduces belt whip, turnover, and misalignment, ensuring stability under vibration and heavy-duty conditions.

Double Sided (Hex) V Belts AA and BB

Double V-belts are designed to be temperature and oil resistant, with a central cord placement allowing flexibility in both directions. They can transmit around 50% of the power of a classical V-belt of the same width. Their double V-profile makes them ideal for S-bend drives and applications where both sides of the belt transmit power, commonly in agricultural machinery and some specialised industrial drives.

Poly V Belts

Poly V-Belts are ideal for compact, high speed ratio drives with short centre distances and limited vibration. They feature a thin, multi-V profile with longitudinal ribs that fit precisely into matching sheave grooves, allowing smaller pulleys than standard V-belts. The increased surface engagement also delivers higher horsepower per inch of the belt width.

Auto Fan Belts SPZX (AV10)

SPZX and AV belts are high-performance V-belts for various industrial applications. With a narrow cross-section and multiple V-shaped ribs, they offer increased flexibility, load capacity, and reduced vibration, making them ideal for high-speed drives and compact designs. Known for their durability and resistance to oil and temperature stresses, these belts can replace multiple traditional belts, resulting in lower operating costs and longer service life.

V Belt with Holes Perforated

Connector V-belts are robust, hole-patterned belts designed for high tensile strength, flexibility, and resistance to oil and temperature. With either fixed or linked connectors, they deliver approximately 50% of the power of standard V-belts of similar size and are ideal for challenging installations where immediate replacement is essential, minimizing downtime. The hole design allows for cleat attachments, making them versatile for conveyor systems and accessible in hard-to-reach drives.

Code	Description	Price

Accu-link Adjustable Belting & NU-T-Link Belting

NU-T-Link and Accu-Link Adjustable Belting are versatile, link-based belts made from durable polyurethane and polyester, offering easy assembly in tight spaces. Resistant to oil, abrasion, temperature, they can be customised to any length, reducing downtime and providing smooth, quiet operation, ideal for applications needing quick adjustments or frequent belt changes.

Polyflex® Belts

Polyflex® Belts are high-performance, compact belts made from durable polyurethane, providing excellent fatigue, wear resistance, and high friction for improved adhesion to tensile cords. The single-unit cast design with ribbed tops offers lateral rigidity, keeps the belt cool, and allows high-speed ratios on small diameter pulleys, making them ideal for compact, high-speed applications like machine tools, milling machines, lathes, and computer peripherals.

Polyurethane Round and V Belting

Polyurethane Round and V Belting is ideal for light-duty power transmission and light-load conveying at moderate speeds. It features high abrasion, tear, grease, oil, petrol, and hydrolysis resistance, with a working temperature range of -20°C to +60°C. Round belting options include a rough "RU" surface for added grip.

Cast Iron V Pulleys

Material of sheave: grey iron ASTM A48-27 (class 30).
Dimensions and designs conform to ASA MPTA standards.
All sheaves are statically balanced as standard.

Biloc V Pulleys

Biloc (Bi-Fit) system offers great advantages: eliminates the need for both grubscrew and keys on the shaft, runs either A or B belts in the same sheave, needs only simple tools for fitting, sheaves can be re-used on different shaft diameters, easy shaft removal, also offers the possibility of fitting two different diameter sheaves on the one bush or two of the same diameter sheaves to make a double groove sheave. Size relates to the A-Pitch Circle Diameter ("A" PCD).

Taperlock V Pulleys SPA

Taperlock pulleys save re boring or keyway costs, can be mounted on a wide range of shafts using different bore Taperlock bushes, simplifies dismantling for maintenance and component replacement, no special tools/skilled labour required (only tool required - hexagonal wrench) saving time and money.

Taperlock V Pulleys SPC & SPZ

Taperlock pulleys save reboring or keyway costs, can be mounted on a wide range of shafts using different bore Taperlock bushes, simplifies dismantling for maintenance and component replacement, no special tools/skilled labour required (only tool required - hexagonal wrench) saving time and money.

Chain British & American Standard

BS and ASA Chains are engineered to meet British and American standard specifications, offering reliable and efficient performance in various industrial applications. These chains provide smooth operation, strength, and durability, reducing wear and ensuring longevity. Ideal for heavy-duty power transmission systems, they deliver reliable, high-performance service in demanding environments.

Sprockets British Standard

BS Sprockets are designed to meet British Standard (BS) specifications, offering reliable performance in power transmission systems. With a robust construction and precise tooth profiles, these sprockets ensure smooth operation, reducing wear and tear on chains. They are ideal for industrial applications requiring high strength and durability.

Sprockets American Standard

ASA Sprockets are engineered to meet the ASA (American Standards Association) specifications, providing reliable and efficient operation in chain-driven systems. Designed for heavy-duty applications, these sprockets feature high-quality construction that enhances performance and longevity. They are ideal for industries requiring precision, strength, and dependable service in power transmission.

Chain Tensioners and Breakers

Chain Tensioners, Chain Pullers, Chain Breakers, Detachers, and Plate Wheel Idlers are crucial for the efficient operation of chain-driven systems. Tensioners maintain proper chain tightness, while pullers and detachers assist with adjustments. Chain breakers enable easy chain separation, and plate wheel idlers guide chain movement, ensuring smooth, reliable performance in heavy-duty applications.

Bearings 6000 Series

Bearings 6000 Series are versatile, deep groove ball bearings designed for a wide range of industrial applications. Known for their high load capacity, durability, and smooth operation, these bearings are ideal for use in machinery where space is limited. They offer long-lasting performance in both radial and axial loads.

Bearings
Single Row Ball, Taper Ball

Single Ball Bearings are designed for applications requiring efficient rotation with minimal friction. Their simple structure makes them ideal for light-duty applications where space and weight are concerns. These bearings provide reliable performance, reduce energy consumption, and extend the service life of the machinery, ensuring smooth and quiet operation.

Rod Ends Imperial & Metric, Stainless Steel, Studded & Hirschmann

Rod Ends are mechanical components used to connect rods to other parts, providing smooth motion and reliable articulation. Featuring a spherical ball within a housing, they allow rotational movement while handling both axial and radial loads. Rod ends are commonly used in automotive, industrial, and aerospace applications for precision movement and durability.

Bearings Self Aligning UC, SB & HC

The UC, SB and HC bearings all feature a precisely machined outer race and spherical inner surface for self-alignment with minor shaft misalignments. The UC has a round bore and uses two set screws to secure the shaft, with sealed grease for broad temperature use. The SB is a lighter, cost-effective version suitable for stamped or lightweight housings, while still sealed for reliability. The HC uses an eccentric self-locking collar to automatically secure the shaft when rotated, with dust and moisture resistant seals for versatile conditions.

Bearings Self Aligning SA, UK, Adaptor & SSUC

The **SA** bearing features an eccentric groove on the inner race and collar that automatically secures the shaft upon rotation, making it compact and lightweight with sealed high-quality grease.

The **UK** bearing has a tapered bore for mounting on shafts with a sleeve adapter, ideal for long or irregular shafts requiring extended assembly time, and includes a sealed grease supply for long-term operation, enhancing service factor through its larger size.

The **Adaptor** is designed for UK tapered bore bearings, featuring a tapered inside diameter to accommodate the shaft and improve service factor.

The **SSUC (Stainless)** bearing, made of stainless steel for corrosive applications, has a round bore, secures the shaft with two hexagonal set screws, and is sealed with food-grade grease for reliable performance in harsh environments.

Cast Iron Housings

P, F, FL, FC, T, and PA Series

The P-series pillow block unit features a robust housing for all-directional loads, ideal for standard power transmissions. The F-series b-bolt square flange unit ensures uniform load distribution and versatile mounting, maximise capacity and lowering costs. The FL series 2-bolt oval flange unit offers a compact, lightweight alternative with easy interchangeability. The FC series 4-bolt cartridge unit has a pilot lip for precise mounting, ideal for rotating drums. The P series take-up unit adjusts belt conveyor tension, while the compact PA series narrow tapped base units fit limited spaces.

Cast Iron Housings

LF, FA, FB, FD and SN Series

The LF, FA, FB, FD, and SN Series bearing housings are designed for various industrial applications, providing durability and support for bearings. The LF Series features lightweight, compact designs ideal for limited mounting spaces. The FA Series is a 2-bolt flange housing suitable for light to medium-duty applications, while the FB Series offers a 3-bolt option for enhanced stability in moderate loads. The FD Series, with its 4-bolt configuration, provides robust support for heavy-duty applications. The SN Series consists of split plummer block housings, commonly made from cast iron, allowing for easy maintenance and assembly, making them suitable for a wide range of operational environments.

Pressed Steel Housings

The PP Series (pressed steel pillow block), PF Series (pressed steel flange unit), and PFL Series (pressed steel oval flange unit) are made of stamped steel, offering lightweight, cost-effective solutions with adequate strength. Ideal for light loading applications, such as lightweight conveyor belts and light shaft loads, the PFL Series is particularly suited for compact spaces with limited mounting options.

Plastic Housings

Thermoplastic housings made from high-grade PBT with seamless stainless steel bolt hole bushings offer strength, stability, and full interchangeability with cast iron. They're re-lubeable, maintenance-free, and resist rust and corrosion, ideal for harsh washdowns and temperatures from -35°C to +102°C. Available in various designs-PPL (pillow block), FPL (4-bolt square flange), NFL (2-bolt oval flange), TPL (take-up), HPL (hanger), TBL (narrow/tapped base), FBL (3-bolt flange), PFL (plastic 4-bolt flange), LFL (lightweight 2-bolt oval flange), and PLFC (4-bolt cartridge flange) - each unit includes solid base protection, covers, and seals to keep contaminants out.

Couplings - Bowex

The design offers free axial movement with low friction, reducing stress during misalignment and minimizing backlash. Made from nylon and steel components, it can operate in high ambient temperatures from -7°F to +180°F without requiring lubrication or maintenance. A heat-stabilized polyamide option is available for temperatures up to +250°F. The nylon sleeves are resistant to dirt, moisture, most chemicals, and petroleum products.

This coupling is maintenance-free, with no need for lubrication, seals, or retainers. It's compact, lightweight, and designed for high torque with low inertia, featuring a minimal shaft gap for close-coupled applications. Its high-speed capability is enhanced by a design free from bolts, pins, flanges, or protrusions that could affect balance or safety. The components slip together easily, allowing for straightforward cleaning, inspection, and adjustments without disassembly. This product is directly interchangeable with Bowex* couplings.

Couplings - Chain

The Roller Chain Coupling is a safe, compact, and powerful flexible coupling, designed to handle loads from 0.1 to 11,000 kW. It transmits torque through two hubs with hardened sprocket teeth, offering high torque capacity and utilizing an ANSI standard double-width roller chain.

This is one of the most cost-effective couplings available in the medium torque range, making it ideal for a range of industries, including steel, copper, paper, petrochemical, food, wastewater, and transportation. Common applications include pumps, compressors, fans, and conveyors—essentially any setting where motors, engines, or turbines are in use.

Couplings - Jaw

Jaw couplings require no lubrication and provide highly reliable service across light, medium, and heavy-duty electrical motor and internal combustion power transmission applications. The fail-safe design ensures continued operation even if the elastomer fails, with no metal-to-metal contact, and they are resistant to oil, dirt, sand, moisture, and grease.

Ideal applications for jaw couplings include pumps, gearboxes, compressors, blowers, mixers, and conveyors. Available types include the L-Type Standard, made from either sintered iron or cast iron; the AL Type, constructed from lightweight aluminum with low overhung load and low inertia; and the C-Type, with standard cast iron hubs.

Couplings - Flender

Flender couplings, including N-EUPEX Type A and B and BIPEX Type BWN, are designed for flexible power transmission. N-EUPEX Type A and B couplings use elastomer rubber elements to absorb shocks and vibrations, providing reliable torque transmission with varying stiffness levels. BIPEX Type BWN couplings feature a compact design with elastomer inserts, offering high damping capacity and compensating for misalignment, making them ideal for various industrial applications.

Gearboxes

Right Angle Worm Reduction Units NMRV

NMRV Gearboxes are compact, right-angle gear units known for their efficiency and versatility. Featuring a robust aluminum housing, they provide smooth power transmission with high torque output. Ideal for various industrial applications, NMRV gearboxes offer durability, low noise operation, and ease of installation, making them perfect for space-constrained environments.

Gearboxes

Right Angle Worm Reduction Units NRV

NRV Gearboxes are right-angle gear units designed for high-efficiency power transmission. With their durable construction and compact design, NRV gearboxes provide reliable performance under heavy loads. These gearboxes are commonly used in applications requiring reduced speed and increased torque, offering excellent durability, low maintenance, and smooth operation for industrial machinery.

Gearboxes

Shafts, Torque Arms, Covers and Flanges

Gearbox parts for NMRV and NRV gearboxes include essential components such as single and double output shafts, plastic covers, torque arms, and output flanges. These parts ensure optimal performance and durability, offering smooth power transmission, easy installation, and reliable operation. They are designed for both maintenance and upgrade flexibility in industrial systems.

Lubrication Super Lube

Super Lube is a patented, multi-purpose synthetic lubricant containing SYNCOLON (PTFE) particles held in suspension. Super Lube lasts longer and out-performs conventional petroleum-based greases and oils. It comes in grease form, a 90-140 weight gear oil and 10W light-weight oil. Packaging includes tubes, grease cartridges, aerosols, bottles, pails and drums.

Lubrication **Toyo-GTM**

TOYO-GTM industrial lubricants can make a significant contribution to achieving higher productivity, improving efficiency and saving energy, for example, in hydraulic systems, gear units and many other applications. Furthermore, rapidly biodegradable lubricants from TOYO-GTM offer an eco-friendly alternative to hydrocarbon-based lubricants.

Lubrication **Pressol**

Pressol grease guns are high-quality lubrication tools designed for efficiently applying grease to machinery and equipment. Known for their durability and ease of use, these grease guns are commonly used in industrial, automotive, and agricultural settings to maintain equipment performance and prevent wear. Pressol offers both manual and pneumatic models, featuring adjustable pressure controls and high-capacity reservoirs. The guns are designed to handle high-pressure environments, delivering consistent grease flow with precision. With their robust construction and reliable performance, Pressol grease guns are essential for ensuring the longevity of mechanical systems and reducing maintenance downtime.

Electric Vibrating Motors MVSI

Italvibras MVSI series electric vibrating motors are designed to deliver high performance and reliability across a range of demanding environments. The MVSI series meets the latest IEC and EN international standards, making it suitable for use in atmospheres with potentially explosive powders. Specifically engineered for hazardous areas 21 and 22, the MVSI motors ensure safe and efficient operation while maintaining precise and consistent vibration output. These motors are widely used in industrial applications, where their robust construction and compliance with stringent safety standards make them ideal for environments that require both durability and high performance.

Electric Vibrating Motors MICRO

Italvibras MICRO series electric vibrators are built for continuous industrial use in applications requiring a reduced centrifugal force and compact size. These MICRO vibrators are versatile and well-suited for feeding, transport, screening, sizing, separation, and compaction processes. They are commonly used in automated machinery across various industries, including chemical, food, pharmaceutical, packaging, and general automation, providing reliable performance in settings where space and precision are critical.

Additionally, the MVSS stainless steel variants are available for high-corrosion environments, ensuring durability and expanding usage across various industries

NETTER Pneumatic Vibrator

NETTER pneumatic vibrators are a compact and versatile devices designed to create vibration in applications that require efficient material flow and processing. Powered by compressed air, these motors provide adjustable vibration intensity, making them ideal for industries such as food processing, pharmaceuticals, and construction. They are commonly used in applications like bulk material handling, where they facilitate the flow of powders, granules, and other materials through chutes, bins, and hoppers. Known for their durability and ease of maintenance, NETTER pneumatic vibrators deliver consistent performance, even in challenging environments.

Anti Vibration Type A, B, C, D, PMP, Z

Cylindrical anti-vibration mounts are versatile solutions for heavy and medium machinery, consisting of two round metal plates with a cylindrical rubber cushion bonded in between. Suitable for shear, compression, or both, these mounts effectively control vibration and shock, offering a compact, lightweight, and easy-to-install option. However, they are not recommended for permanent tension loading.

Anti Vibration
AEON

Aeon anti-vibration mounts are designed to provide effective vibration and shock isolation for a wide range of industrial applications. Their key benefits include enhanced stability and reduced noise, which help to improve the longevity and performance of machinery. Constructed with high-durability materials, Aeon mounts effectively absorb vibrations, minimizing wear on equipment and reducing maintenance needs. They are also compact, easy to install, and adaptable for various load capacities and environmental conditions. These mounts are ideal for applications in industries such as manufacturing, automotive, and construction, where reliable vibration control is essential for safe and efficient operation.
