

LexisNexis® E-Discovery Solutions

Gain greater control over e-discovery with flexible, integrated software and hosting options.

LexisNexis® offers comprehensive solutions that work together—and with other industry-leading tools—to help your internal and external teams control the volume of data, reduce litigation costs, and maintain a seamless chain of custody throughout discovery.

Each of these solutions can be offered in a hosted environment, with flexible options and access to fully customizable support resources dedicated to your success.

Flexibility

- Collaborate with legal vendors and outside counsel using e-discovery products that work together easily.
- Integrate with third-party software applications, if desired.
- Be litigation-ready: Securely store potential litigation data with customized hosting options.

Control

Whether you perform e-discovery in-house or outsource the work, choose from flexible options that match your needs, priorities and resources.

- Gain early insight into the nature and amount of relevant data
- Reduce the volume of data your internal or external team needs to process, review and store.
- Dramatically decrease discovery costs.

Trust

Count on a legal technology provider committed to ongoing innovation, transparent pricing and prompt, reliable support—all with a focus on delivering the best solution for your company.

LexisNexis® Hosted Litigation Solutions
Host all your litigation data and software—securely in a private cloud.

Early Data Assessment LexisNexis® Early Data Analyzer

Process Data LAW PreDiscovery®

Review Documents Concordance®

Take advantage of flexible, integrated solutions for early data assessment, processing and document review

Work with your IT Department or litigation team to accomplish vital tasks:

Complete early data assessment prior to processing

How can you identify the most relevant documents as early as possible? Use **LexisNexis® Early Data Analyzer** to gain insight into the size and scope of responsive data by indexing, filtering and searching data right at the source location—on a network drive or external drive. Eliminate duplicate, irrelevant and non-responsive files **before time-consuming processing**.

Dramatic data reduction

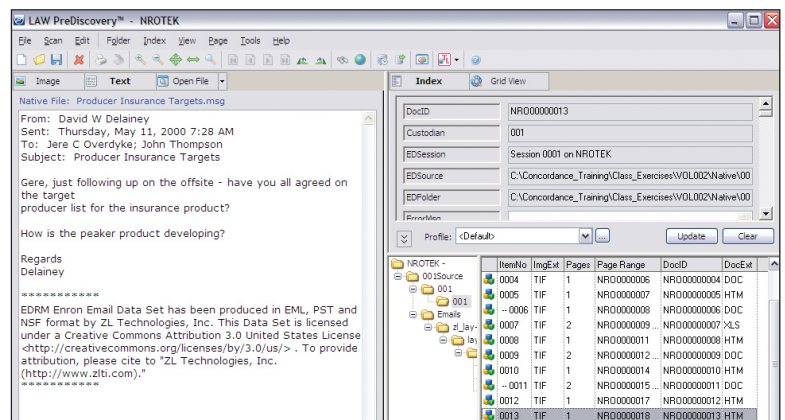

"In six days, we went from 1TB to a 74GB production with the help of LexisNexis Early Data Analyzer. Still a lot of data, but we were feeling the weight on our shoulders (and our document collection) coming off."

—Wade Peterson, Director of Practice Support, Bowman & Brooke

Process electronic and paper documents

Then, use **LAW PreDiscovery® software**, which works as the "processing engine" to bring in all of the potential evidentiary documents—both paper and electronic—needed throughout discovery.

This software allows your teams to **further** eliminate duplicate, irrelevant and non-responsive files—and then process only the essential data **prior to costly document review**.

Reduce the volume of data your outside counsel has to review by processing files in-house with LAW PreDiscovery software. Widely used by leading litigation support vendors, LAW PreDiscovery has a track record your team can count on for in-house work as well.

"We've used a number of e-discovery software products over the years and LAW PreDiscovery is hands-down our favorite of them all."

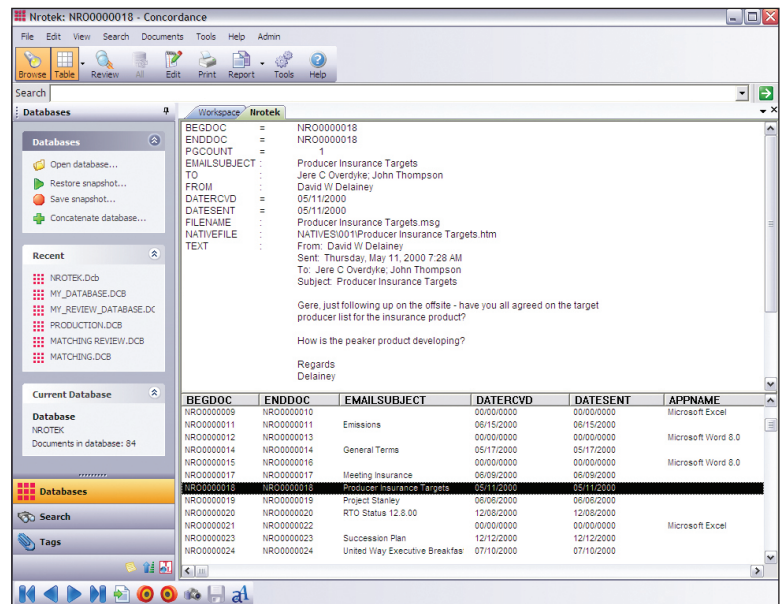

—Jim Havidic, E-discovery Division Manager, Elijah Technologies

Document review: for your contract attorneys, law-firm or in-house legal team

After you've cut your data down to the relevant documents with LAW PreDiscovery, simply export potentially responsive data to **Concordance® discovery management software**. Concordance helps manage and review the high volume of documents and allows your internal or external team to search, review, produce and share litigation documents.

Are multiple parties working on your case? **Concordance® FYI™** helps you collaborate in real time to find facts and analyze with precision. It's designed to go beyond the desktop and onto the Web, giving you control and flexibility to grant access to a document reviewer or an expert, as needed.

Widely used and recognized across business and government, Concordance also enables you to coordinate effectively with agencies such as the United States Department of Justice.

Use Concordance software to search, review and produce litigation documents.

"Concordance is very easy to learn. I can manage documents much more efficiently and perform searches quickly."

—Elizabeth Bethel, Paralegal, Jones, Bell, Abbott, Fleming & Fitzgerald L.L.P.

Count on a technology provider you can trust.

Hosting solutions in a secure, private cloud

In the face of rapidly increasing data volume associated with today's legal cases, companies are planning ahead to be litigation-ready. Having quick, secure access to relevant data is essential, but adding servers in-house can be costly. External hosting is often an optimal solution with straightforward, predictable pricing—you pay only for what you use.

With more than 35 years of legal industry data management experience, LexisNexis is committed to delivering hosting solutions, exclusive software tools and processing capacity that can accommodate a case of virtually any size and complexity. You can choose from two different solutions, based on your needs:

- **LexisNexis® Hosted Litigation Solutions On-Demand**, giving you turnkey, collaborative, full-service, remote access to award-winning software to support your litigation on a case-by-case basis.
- **LexisNexis Hosted Litigation Solutions Enterprise**, offering more options—including customized software-agnostic solutions in your own private cloud—to help minimize the risk and expense of hosting your own litigation data.

Gain more control over e-discovery.
