#### **Course Rationale:**

This course aims at providing adequate exposure to the theory and applications of Calculus and Linear Algebra; It also aims to gradually develop in students an ability to apply these theoretical constructs to solve problems within Engineering domain. This course covers Integration of single variable functions and its applications, Differential calculus of single and multivariable functions, Matrix Algebra, Vector Spaces, Linear Transformation and Eigen value problems.

#### Course Objectives:

- To instill in prospective engineers knowledge of techniques in calculus, multivariate analysis and linear algebra.
- 2. To equip the students with intermediate to advanced level concepts and aligned tools to help them tackle advanced mathematics and related applications.

#### Course Outcomes:

After completion of the course, students would be able to:

- 1. Implement appropriate techniques of Differential and Integral Calculus to solve problems.
- 2. Demonstrate understanding of the fundamental concepts of Linear Algebra and carry out related computational skills.
- 3. Analyse functions, matrices and systems of linear equations.
- 4. Apply Calculus techniques and Algebraic skills to solve real life problems.

#### Pedagogy:

Lectures, tutorials, presentations, application-based videos, use of mathematical software.

#### Textbooks:

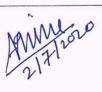

TB1. Linear Algebra: A Modern Introduction, 3 e, D. Poole, Brooks/Cole, 2010.

TB2. Higher Engineering Mathematics, 1 e, B.V. Ramana, McGraw Hill Education, 2017.

TB3. Higher Engineering Mathematics, 44 e, B.S. Grewal, Khanna Publishers, 2017.

#### Reference Books:

RB1. Calculus, 13 e, G. B. Thomas, Pearson 2014.

RB2. Engineering Mathematics- I, 1 e, Veerarajan T, McGraw-Hill Education, 2016. RB3. Advanced Engineering Mathematics, 10 e, Erwin Kreyszig, Wiley India, 2017.

#### Course Rationale:

This course aims to develop an understanding of analysis techniques applied to dc and ac circuits. It enhances the understanding of electrical and magnetic circuits through the study of basic concepts of electric and magnetic circuits, various theorems and electrical quantities.

#### Course Objectives:

- Equip the student to understand and solve simple ac and dc electrical and magnetic circuits using different theorems.
- To enable the student to obtain a basic understanding of the working principle and applications of motors.
- 3. To impact hands-on experience in assembling and testing of circuits.

#### **Course Outcomes:**

After completion of the course, students would be able to:

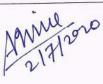

- 1. Analyze dc circuits using network theorems.
- 2. Understand and analyze AC circuits.
- 3. Discuss the working principle and applications of transformer, DC and AC machines.
- 4. Understand the concepts of power converter and electrical installation.

#### Pedagogy:

- 1. Classroom lectures and discussion.
- Learning through conducting laboratory experiments and in-class problem solving.
- 3. Using the flipped classroom technique for participative learning.
- 4. Peer to Peer learning

#### Textbook:

- TB1. Basic Electrical Engineering, 1 e, D. C. Kulshreshtha, Tata McGraw Hill, 2009.
- TB2. Electrical and Electronics Technology, 10 e, E. Hughes, Pearson Education, 2013.
- TB3. Power Electronics: Circuits, Devices and Applications, 3 e, M. H. Rashid, Pearson Education India, 2009.

#### Reference Books:

RB1. Electrical Engineering Fundamentals, 2 e, V. D. Toro, Prentice Hall India, 2010.

RB2. Fundamentals of Electrical Engineering and Electronics, 1 Multicolor e (Reprint 2009), B. L. Theraja, S. Chand & Co., 2006.

#### Course Rationale:

This course aims to introduce students with the different concepts of optics and its applications. Also, it aims to develop in students, an insight into applying the different laws of electromagnetism and quantum mechanics in everyday life.

#### Course Objectives:

- 1. To enable students to understand the basic principles of optics, electricity and magnetism, quantum physics and their applications.
- 2. To enhance the student's ability to apply the principles of Physics in solving engineering problems in everyday life.

#### **Course Outcomes:**

After completion of the course, students would be able to:

- 1. Understand the principles of optics viz., diffraction polarization and apply same to different technologies like LASER and fiber optics.
- 2. Interpret the laws of electromagnetism and various terms related to electromagnetic properties of matter such as, permeability, polarization, etc.
- 3. Explain the basic laws related to quantum mechanics and apply them to solve simple quantum mechanical problems.

#### Pedagogy:

Work-based learning, Context-based learning, Adaptive Teaching

#### Textbooks:

- TB1. Optics, 6 e, Ajoy Ghatak, McGraw-Hill Education (India) Pvt. Ltd., 2017.
- TB2. Introduction to electrodynamics, 4 e, D. J. Griffiths, Pearson Education Limited, 2015.
- TB3. Quantum Physics of Atoms, Molecules, Solids, Nuclei, and Particles, 2 e, R. Eisberg and R. Resnick, John Wiley & Sons, Indian Reprint, 2013.

#### Reference Books:

RB1. Concept of Modern Physics, 7 e (SIE), A. Beiser, S. Mahajan and S. Choudhury, Tata McGraw Hill, 2015.

RB2. Lectures on Physics Vol – I, Mainly Mechanics, Radiation, and Heat, 1 e, R. Feynman, Pearson Education, 2016.

RB3. Lectures on Physics Vol – II, Mainly Electromagnetism and Matter, 1 e, R. Feynman, Pearson Education, 2016.

RB4. Lectures on Physics Vol - III, Quantum Mechanics, 1e, R. Feynman, Pearson Education, 2016.

#### Course Rationale:

This course is aimed at providing basic understanding of the fundamentals of Engineering Graphics; mainly visualization, graphics theory, standards & conventions of drawing, the tools of drawing and the use of drawings in engineering applications. The topics covered are tailored to suit the requirements of undergraduate studies in engineering. The course has been structured to include sufficient simulations which would aid the student in visualization of three dimensional objects and developing the drawing.

#### Course Objectives:

- 1. To impart knowledge about engineering design and its place in society.
- 2. To introduce the visual aspects of engineering design.
- 3. To familiarize the aspects of engineering graphics standards.
- 4. To be able to create solid models.
- 5. To apply computer-aided geometric design concepts and creation of working drawings.

#### Course Outcomes:

After completion of the course, students would be able to:

- 1. Interpret and communicate drawings effectively using different types of curves, lines, planes.
- 2. Analyze the concepts of projection and section of right regular solids with their development.
- 3. Apply the techniques, skills, and modern tools to create projections of machine components with the help of software.

#### Pedagogy:

Lectures, Experiential learning activities, quizzes, application-based videos, use of drafting software.

#### Textbooks:

TB1. Engineering Drawing, 53 e, N. D. Bhatt, V. M. Panchal and P. R. Ingle, Charotar Publishing House, 2014.

#### Course Rationale:

Constitution is the basic law of the land for any nation, and it is expected for its citizens to have knowledge of it. This course aims to ingrain into the student's mind the basic principles of Constitution of India. Students are already exposed to Preamble of the constitution, but the exposure is only superficial. This course aims at providing in depth rationale behind the Preamble. It also aims to provide knowledge with respect to fundamental rights provided in the Constitution and permissible restrictions upon it and the institutions within 'State' and their inter-relation with each other. Topics covered in this course consists of the evolution and nature of the Indian Constitution, Preamble, Fundamental rights and duties, Directive Principles of State Policy, the Union Parliament, Federal structure of Indian polity, Indian Judiciary, Emergency provisions and Amendment powers and its usage since inception of Constitution till date.

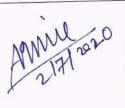

#### Course Objectives:

- To enable the students to understand the principles mentioned in our Constitution and apply them in regular course of activities, personal or professional.
- 2. To enable them to know the structure of Indian polity, legal framework and inter-relations of institutions of 'State' in India

#### Course Outcomes:

After completion of the course, students would be able to:

- Understand the historic evolution of the Indian Constitution, its drafting, nature and to understand the principles mentioned in its Preamble.
- Inculcate fundamental rights in its true sense and also the permissible restrictions upon it so as to enjoy
  these rights within permissible limits while simultaneously performing their duties and concept of
  Directive Principles of State policy and to apply these principles into their professional lives.
- 3. Ingrain the structure of our polity and inter-relation of various organs of State Legislature (Parliament), Executive (Government) and Judiciary (Courts) and also relation between Union, States and Local Self Governments and amendment of the Constitution by the Parliament.
- Attain knowledge of the Emergency provisions, when and how it is imposed, to know the additional
  powers the bestowed upon the Government at times of Emergency and to understand the Amendment
  procedure.

#### Pedagogy:

Lectures, presentations and group discussions.

#### Textbooks:

TB1. Introduction to the Constitution of India, 22 e, Dr. Durga Das Basu, Lexis Nexis, 2016.

#### Reference Books:

RB1. The Constitution of India, 14 e, P. M. Bakshi, Universal Law Publishing, 2017.

RB2. Constitutional Law of India, 54 e, J. N. Pandey, Central Law Agency, 2017.

RB3. We the people, N. A. Palkhivala, UBS Publishers Distributors, 1999.
