ORACLE® NETSUITE

Jitterbit

Get Connected and Amplify the Value of ERP and CRM Data

"Jitterbit provides us a standard platform on which to build our integration projects, allowing us to quickly and cost-effectively synchronize our ERP and CRM apps."

- Keith Lovern, Technical Operations, Acal BFi

NetSuite helps thousands of companies plan all aspects of their business in the cloud. But to get the most out of NetSuite, companies need it to reflect information from many other sources, including CRM systems, databases, or custom apps.

Jitterbit makes it fast and easy to connect NetSuite to other popular systems, improving every company's ability to get the most out of NetSuite. Shorten integration implementation time and make business processes as smooth as possible with pre-built templates that even non-technical users can deploy and manage.

By connecting NetSuite to other systems, companies can extract greater value from NetSuite and operate with complete confidence that every decision made and resource allocated is based on the most accurate, up-to-date information.
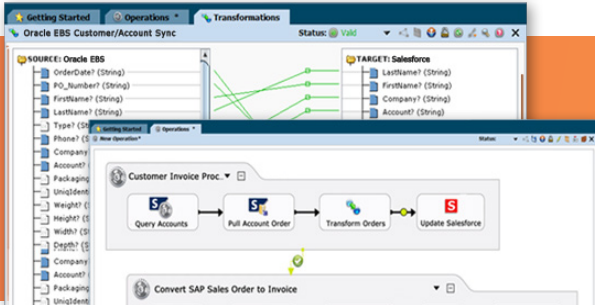

Jitterbit offers the speed and flexibility needed to enable successful cloud integration and affords the opportunity to select NetSuite as a system of record for accounting, product information, or even customer information based on individual business needs. With Jitterbit in place, NetSuite becomes the reliable backbone of a successful digital business.

NetSuite Ecosystem Benefits

- Connect the front and back office quickly, seamlessly, and accurately

- Amplify the value of all information in NetSuite by connecting it to other systems

- Establish a clear system of record to eliminate data duplication and inaccuracy

- Connect disparate systems to take full advantage of NetSuite to manage all products, accounting, customers, and other information

- Templates accelerate time to value when connecting NetSuite with other systems

BENEFITS OF CONNECTIVITY

✔ Gain real-time visibility into all aspects of the business

✔ Save time and empower employees to focus on their core jobs

✔ Ensure that data is accurate and synchronized everywhere

✔ Automate processes and streamline business operations

✔ Enable real-time customer self-service

✔ Customize sales and marketing offers for customers

✔ Realize return on investment quickly, with low total cost of ownership

One Platform
# Limitless Opportunities

Jitterbit's NetSuite Connector

Natively connect any cloud or on-premises application or data source to NetSuite.

Capabilities of the connector include:

- Access to all available services, operations, and messages as defined in the NetSuite WSDL
- Support for the following methods to all available objects: Search, Create, Update, Upsert, Get List and Delete
- Support for two-factor authentication and token based authentication

Use the NetSuite Connector to automate business processes and integrate NetSuite with other critical systems. Popular use cases include, but are not limited to:

- Synchronize critical customer information between NetSuite ERP and your CRM systems.
- Automate sales and services business processes such as Quote to Order and Service Tracking.
- Trigger notifications from NetSuite to your company's messaging apps such as Slack.
- Update Inventory, Payment and Credit information, Product Catalog and other key attributes across your Sales and Service applications.

Built for
ORACLE
NETSUITE
Integrated SuiteApp

Jitterbit Harmony has "Built for NetSuite" (BFN) verification for the 19.2 NetSuite release.
