FOR IMMEDIATE RELEASE

AutoQL by Chata Now Available on Microsoft AppSource

Calgary, AB — September 21, 2022 - Chata, today announced the availability of AutoQL on Microsoft AppSource, an online cloud marketplace providing tailored line-of-business solutions.

Chata builds AutoQL, an API-first solution that empowers non-technical business users with easy-to-use, self-service analytics. Chata's AI dynamically translates natural language into database query language(s). This enables everyone – even non-technical business users – to explore data in real-time, simply by asking questions in their own words.

AutoQL can now be accessed from both Microsoft Teams and Excel, making it possible for users to explore and analyze data directly (and securely) from their data warehouse/lakehouse in their own Azure environment. Enabling self-service data accessibility from these modern workplace tools reduces ad hoc data demands on internal technical teams while simultaneously improving data-driven collaboration and decision-making across business units.

"We understand that modern enterprises greatly depend on both Microsoft Teams and Excel, and saw an opportunity to streamline data-driven workflows and accelerate time-to-insights by making AutoQL seamlessly accessible in these tools," says Kelly Cherniwchan, CEO and Founder of Chata. "Now, any user can access detailed data in their Azure environment to populate existing workflows within Microsoft Excel or collaborate in real-time around key insights and critical decisions in Microsoft Teams."

Chata has focused its technology around creating conversational data experiences at the scale of the modern data warehouse, which is what today's data-driven organizations require to optimize business outcomes.

"Through Microsoft AppSource, customers around the world can easily find tailored line-of-business partner solutions that work with the products they already use," said Toby Bowers, General Manager, Business Applications Group, Microsoft Corp. "We're happy to welcome Chata's solution to the growing AppSource ecosystem."
