Dynamic Version

Fancy Color Diamond appreciation revolves around beauty and rarity. The Rarity Report illustrates the market prevalence of a polished diamond. Whether a diamond is one of several hundred or is introduced to the market once a decade, rarity was, and always will be, a part of the epic story of a fancy color diamond.

1 In 730,000

Only **1 in ~ 730,000** diamonds will have similar characteristics

The Yellow color of your natural 5.63 carat, Fancy Intense Yellow is attributed to a significant concentration of nitrogen atoms within its structure. These atoms absorb blue light, giving the diamond its distinct yellow hue. The intensity of the yellow color increases with the concentration of nitrogen in the diamond. Therefore, a higher concentration of nitrogen results in a more vibrant yellow appearance.
