

### **Crop Production**

ISSN: 1936-3737

Released October 12, 2023, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

#### **Special Note**

Each October, NASS has the opportunity to revise planted and harvested acreage estimates for canola, dry edible beans, and sunflower. Revisions are based on all available data, including the latest certified acreage data from the Farm Service Agency (FSA). All States in the estimating program for these crops were subject to review and updating. Detailed estimates are found on pages 12, 15, and 21.

Corn Production Down Less Than 1 Percent from September Forecast Soybean Production Down 1 Percent Cotton Production Down 2 Percent Orange Production Up 10 Percent from Last Season

**Corn** production for grain is forecast at 15.1 billion bushels, down less than 1 percent from the previous forecast but up 10 percent from 2022. Based on conditions as of October 1, yields are expected to average 173.0 bushels per harvested acre, down 0.8 bushel from the previous forecast and down 0.4 bushel from last year. Area harvested for grain, forecast at 87.1 million acres, is unchanged from the previous forecast but up 10 percent from the last year.

**Soybean** production for beans is forecast at 4.10 billion bushels, down 1 percent from the previous forecast and down 4 percent from 2022. Based on conditions as of October 1, yields are expected to average 49.6 bushels per acre, down 0.5 bushel from the previous forecast but equal to 2022. Area harvested for beans in the United States is forecast at 82.8 million acres, unchanged from the previous forecast but down 4 percent from 2022.

All cotton production is forecast at 12.8 million 480-pound bales, down 2 percent from the previous forecast and down 11 percent from 2022. Based on conditions as of October 1, yields are expected to average 767 pounds per harvested acre, down 19 pounds from the previous forecast and down 183 pounds from 2022. Upland cotton production is forecast at 12.5 million 480-pound bales, down 2 percent from the previous forecast and down 11 percent from 2022. Pima cotton production is forecast at 356,000 bales, unchanged from the previous forecast but down 24 percent from 2022. All cotton area harvested is forecast at 8.02 million acres, unchanged from the previous forecast but up 10 percent from 2022.

The United States all orange forecast for the 2023-2024 season is 2.74 million tons, up 10 percent from the 2022-2023 final utilization. The Florida all orange forecast, at 20.5 million boxes (923,000 tons), is up 30 percent from last season's final utilization. In Florida, early, midseason, and Navel varieties are forecast at 7.50 million boxes (338,000 tons), up 22 percent from last season's final utilization. The Florida Valencia orange forecast, at 13.0 million boxes (585,000 tons), is up 35 percent from last season's final utilization.

The California all orange forecast is 44.5 million boxes (1.78 million tons), up 3 percent from the last season's final utilization. The California Navel orange forecast is 37.0 million boxes (1.48 million tons), unchanged from last month but up 1 percent from the last season's final utilization. The California Valencia orange forecast is 7.50 million boxes (300,000 tons), up 12 percent from last season's final utilization. The Texas all orange forecast, at 800,000 boxes (34,000 tons), is down 29 percent from last season's final utilization.

This report was approved on October 12, 2023.

Deputy Secretary of Agriculture Xochitl Torres Small Agricultural Statistics Board Chairperson Joseph L. Parsons

### **Corn for Grain Objective Yield Data**

The National Agricultural Statistics Service is conducting objective yield surveys in 10 corn-producing States during 2023. Randomly selected plots in corn for grain fields are visited monthly from September through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

2023	26	60	, ,							

<sup>(</sup>Z) Less than half of the unit shown.

<sup>1</sup> Includes corn in the dent stage of development. Ears are firm and solid. Kernels fully dented with no milk present in most kernels.
2 Includes that portion of the crop that is mature and ready for harvest. No green foliage is present.

### Soybean Objective Yield Data

The National Agricultural Statistics Service is conducting objective yield surveys in 11 soybean-producing States during 2023. Randomly selected plots in soybean fields are visited monthly from September through harvest to obtain specific counts and measurements. Data in these tables are actual field counts from this survey.

#### Soybean Pods with Beans per 18 Square Feet - Selected States: 2019-2023

NOAA Regional Climate Centers

#### **September Weather Summary**

Late-season warmth in New England and between the Rockies and the Appalachians was generally sandwiched between cool conditions in the Far West and portions of the southern Atlantic States. September temperatures averaged 4 to 6°F above normal in many locations across Texas and environs, while readings averaged at least 2 to 4°F above normal across parts of the northern Plains, upper Midwest, and northern New England. It was the warmest September on record in Texas locations such as Austin, Del Rio, and San Antonio. In addition, the warm weather prevented freezes from reaching any of the Nation's key agricultural regions through the end of September. Meanwhile, cooler-than-normal conditions were prominent in much of California and the Great Basin, where monthly temperatures locally averaged more than 4°F below normal.

The warmth across the Plains, Midwest, and South promoted a rapid pace of summer crop maturation, as well as early-season harvest efforts. By October 1, most (86 percent) of the Nation's soybeans were dropping leaves, while 82 percent of the corn was fully mature. On the same date, harvest was 23 percent complete for both crops. In the South, 75 percent of the Nation's rice was harvested by October 1, ahead of the 5-year average of 69 percent. In drier areas, however, crop conditions were less than optimal, with 17 percent of the Nation's corn, 18 percent of the soybeans, 27 percent of the sorghum, and 43 percent of the cotton rated in very poor to poor condition as October began. Texas led the Nation on October 1 with 65 percent of its cotton rated very poor to poor.

Meanwhile, winter wheat planting—40 percent complete, nationally, by October 1—began during September under mixed conditions, with some areas having adequate moisture for germination and establishment, and others contending with significant drought. By September 26, nearly one-half (47 percent) of the Nation's winter wheat production area was experiencing drought, according to the Drought Monitor. On that date, drought covered 38 percent of the Lower 48 States, up from 34 percent at the end of August and a 3-year low of 19 percent on May 30, 2023. Extreme to exceptional drought (D3 to D4) was observed by late September in portions of 18 States, topped by Louisiana with 85 percent coverage. D3 to D4 also covered at least one-fifth of Mississippi (47 percent), Texas (38 percent), New Mexico (32 percent), Iowa (25 percent), and Kansas (21 percent).

On October 1, at least one-half of the rangeland and pastures were rated in very poor to poor condition in seven states, led by Washington (76 percent) and Texas (73 percent). Other states on that list were Louisiana and Minnesota, both at 65 percent, along with Oregon (54 percent), Kansas (51 percent), and Mississippi (50 percent). Similarly, topsoil moisture was rated at least one-half very short to short in 20 States, mainly across the Plains, Northwest, and Mississippi and Ohio Valleys, helping to push the national value to 55 percent very short to short by October 1. Lack of runoff into the Mississippi River basin lowered water levels to near-record values from where the Ohio River enters the Mississippi River, downstream to the Mississippi Delta. On September 28, the Mississippi River at Memphis, Tennessee, fell within 0.17 foot of the record low established on October 21, 2022.

As September began, Post-Tropical Cyclone Idalia was moving away from the mainland United States, with diminishing impacts along the Atlantic Coast. However, recovery efforts continued in Florida's Big Bend, where Idalia had moved ashore on the morning of August 30 as a Category 3 hurricane, with sustained winds near 125 mph. About 2 weeks later, former Category 5 Hurricane Lee reached the Canadian Maritimes, first reaching land on Long Island in Nova Scotia on the afternoon of September 16, approximately 50 miles east-southeast of Eastport, Maine, with sustained winds near 70 mph. Wind gusts associated with Lee topped 50 mph in parts of coastal New England, while rainfall exceeded 2 inches in portions of eastern Maine. Finally, Tropical Storm Ophelia made landfall near Emerald Isle, North Carolina, just before daybreak on September 23, with sustained winds near 70 mph. Less than 18 hours after moving ashore, Ophelia had lost most of its tropical characteristics and was re-classified as a post-tropical cyclone. Still, the short-lived storm produced as much as 4 to 8 inches of rain in the middle Atlantic coastal plain, as well as widespread wind gusts from 50 to 70 mph. Even after Ophelia's dissipation, cool, cloudy weather lingered for days along portions of the Atlantic Coast, with flooding rain developing in the New York City metropolitan area on September 29.

#### **September Agricultural Summary**

September was warmer than normal for most of the Nation. Parts of the upper Midwest, New England, Great Plains, and Southwest recorded temperatures 4°F or more above normal for the month. In contrast, most of the Great Basin and

California, as well as large parts of the southern Atlantic Coast and Pacific Northwest, were cooler than normal. Locations in California, Nevada, and Utah recorded temperatures 4°F or more below normal. While much of the East remained drier than normal, parts of the Northeast Coast and locations along Lake Superior recorded at least twice the normal amount of precipitation for the month. Parts of Florida and the Northeast Coast received 8 inches or more of rain for the month. In the West, while large parts of California and Texas remained dry, much of the Great Basin and large parts of the Pacific Northwest, as well as locations in the Plains, Rockies, and Southwest, recorded at least twice the normal amount of precipitation.

By September 3, ninety-three percent of the corn acreage was at or beyond the dough stage, 2 percentage points ahead of last year and 1 percentage point ahead of the 5-year average. By September 3, sixty-seven percent of this year's corn acreage was denting, 6 percentage points ahead of last year and 2 percentage points ahead of the 5-year average. Denting progress advanced 10 percentage points or more in 14 of the 18 estimating States during the week. Eighteen percent of the Nation's corn acreage was mature by September 3, four percentage points ahead of last year and 2 percentage points ahead of the 5-year average. By September 17, ninety percent of this year's corn acreage was denting, 4 percentage points ahead of last year and 3 percentage points ahead of the 5-year average. Fifty-four percent of the Nation's corn acreage was mature by September 17, sixteen percentage points ahead of last year and 10 percentage points ahead of both last year and the 5-year average harvest pace. Harvest was underway in 14 of the 18 estimating States. Eighty-two percent of the Nation's corn acreage was mature by October 1, nine percentage points ahead of last year and 7 percentage points ahead of the 5-year average. Corn maturing advanced 10 percentage points or more in 12 of the 18 estimating States. Twenty-three percent of the 2023 corn acreage was harvested by week's end, 4 percentage points ahead of last year and 2 percentage points ahead of the 5-year average harvest pace. On October 1, fifty-three percent of the Nation's corn acreage was rated in good to excellent condition, 1 percentage point above the same time last year.

Nationally, 95 percent of the Nation's soybean acreage had begun setting pods, 1 percentage point ahead of both last year and the 5-year average. Leaf drop was 16 percent complete Nationally by September 3, seven percentage points ahead of last year and 3 percentage points ahead of the 5-year average. Leaf drop was 54 percent complete Nationally by September 17, fifteen percentage points ahead of last year and 11 percentage points ahead of the 5-year average. Soybean harvest across the Nation was 5 percent complete by September 17, two percentage points ahead of last year and 1 percentage point ahead of the 5-year average. Harvest was underway in 15 of the 18 estimating States. Leaf drop was 86 percent complete Nationally by October 1, eight percentage points ahead of last year and 9 percentage points ahead of the 5-year average. Leaf drop advanced 10 percentage points or more in 12 of the 18 estimating States during the week. Soybean harvest across the Nation was 23 percent complete by October 1, three percentage points ahead of last year and 1 percentage point ahead of the 5-year average. On October 1, fifty-two percent of the Nation's soybean acreage was rated in good to excellent condition, 3 percentage points below the same time last year.

Nationwide, producers had sown 7 percent of the intended 2024 winter wheat acreage by September 10, two percentage points behind last year but equal to the 5-year average. Nationwide, producers had sown 26 percent of the intended 2024 winter wheat acreage by September 24, four percentage points behind last year and 3 percentage points behind the 5-year average. Planting progress was most advanced in Nebraska at 60 percent planted, 23 percentage points ahead of last year and 9 percentage points ahead of the 5-year average. Nationwide, 7 percent of the winter wheat acreage had emerged by September 24, one percentage point behind last year but 1 percentage point ahead of the 5-year average. Nationwide, producers had sown 40 percent of the intended 2024 winter wheat acreage by October 1, one percentage point ahead of last year but 3 percentage points behind the 5-year average. Nationwide, 15 percent of the winter wheat acreage had emerged by October 1, one percentage point ahead of last year but 1 percentage point behind the 5-year average.

By September 3, ninety-four percent of the Nation's cotton acreage had begun setting bolls, 3 percentage points behind last year and 1 percentage point behind the 5-year average. By September 3, thirty-two percent of the Nation's cotton had open bolls, 5 percentage points behind last year and 1 percentage point behind the 5-year average. By September 17, fifty-five percent of the Nation's cotton had open bolls, 3 percentage points behind last year but 3 percentage points ahead of the 5-year average. By September 17, nine percent of the Nation's cotton acreage was harvested, 2 percentage points behind last year and 1 percentage point behind the 5-year average. By October 1, seventy-five percent of the Nation's cotton had open bolls, 1 percentage point behind last year but 2 percentage points ahead of the 5-year average. Advances

of 10 percentage points or more from the previous week occurred in 9 of the 15 estimating States. By October 1, eighteen percent of the Nation's cotton acreage was harvested, 3 percentage points behind last year but 1 percentage point ahead of the 5-year average. On October 1, thirty percent of the 2023 cotton acreage was rated in good to excellent condition, 1 percentage point below the same time last year.

By September 3, ninety-three percent of the Nation's sorghum acreage had reached the headed stage, 2 percentage points ahead of last year but 3 percentage points behind the 5-year average. Sixty-one percent of the Nation's sorghum acreage was at or beyond the coloring stage by September 3, one percentage point ahead of last year but 3 percentage points behind the 5-year average. By September 3, twenty-eight percent of the Nation's sorghum acreage was mature, 1 percentage point ahead of last year but equal to the 5-year average. Nineteen percent of the 2023 sorghum acreage had been harvested by September 3, one percentage point behind last year and 2 percentage points behind the 5-year average. Eighty-five percent of the Nation's sorghum acreage was at or beyond the coloring stage by September 17, two percentage points ahead of last year but 2 percentage points behind the 5-year average. By September 17, forty-seven percent of the Nation's sorghum acreage was mature, 4 percentage points ahead of both last year and the 5-year average. Twenty-four percent of the 2023 sorghum acreage had been harvested by September 17, equal to last year but 1 percentage point behind the 5-year average. Ninety-six percent of the Nation's sorghum acreage was at or beyond the coloring stage by October 1, one percentage point ahead of last year but 1 percentage point behind the 5-year average. Coloring was at or near completion in all 6 estimating States. By October 1, seventy percent of the Nation's sorghum acreage was mature, 3 percentage points ahead of both last year and the 5-year average. Thirty-five percent of the 2023 sorghum acreage had been harvested by October 1, two percentage points ahead of last year and 1 percentage point ahead of the 5-year average. Eighty-five percent of Texas' sorghum acreage was harvested by October 1, five percentage points behind last year but 1 percentage point ahead of the 5-year average. Forty-one percent of the Nation's sorghum acreage was rated in good to excellent condition on October 1, twenty-one percentage points above the same time last year.

Nationally, 34 percent of the rice acreage was harvested by September 3, eleven percentage points ahead of last year and 8 percentage points ahead of the 5-year average. On September 10, seventy-one percent of the Nation's rice acreage was rated in good to excellent condition, 1 percentage point below the same time last year. Nationally, 57 percent of the rice acreage was harvested by September 17, fourteen percentage points ahead of last year and 10 percentage points ahead of the 5-year average. Nationally, 75 percent of the rice acreage was harvested by October 1, seven percentage points ahead of last year and 6 percentage points ahead of the 5-year average.

Ninety-five percent of the Nation's oat acreage had been harvested by September 10, one percentage point ahead of last year but 1 percentage point behind the 5-year average. Oat harvest progress advanced 19 percentage points in North Dakota. Harvesting of oats was complete or nearing completion in all 9 estimating States except North Dakota.

By September 3, barley producers had harvested 80 percent of the Nation's barley crop, 5 percentage points ahead of last year but 1 percentage point behind the 5-year average. By September 24, barley producers had harvested 96 percent of the Nation's barley crop, 1 percentage point behind the previous year and 2 percentage points behind the 5-year average. Harvesting of barley was complete or nearing completion in all 5 estimating States.

By September 3, seventy-four percent of the Nation's spring wheat had been harvested, 6 percentage points ahead of the previous year but 3 percentage points behind the 5-year average. By September 24, ninety-six percent of the Nation's spring wheat had been harvested, equal to both the previous year and the 5-year average. Harvesting of spring wheat was complete or nearing completion in all 6 estimating States.

Four percent of the Nation's peanut acreage was harvested as of September 17, equal to last year but 1 percentage point behind the 5-year average. Sixteen percent of the Nation's peanut acreage was harvested as of October 1, ten percentage points behind last year and 6 percentage points behind the 5-year average. On October 1, forty-eight percent of the Nation's peanut acreage was rated in good to excellent condition, 17 percentage points below the same time last year.

By September 17, sugarbeet producers had harvested 10 percent of the Nation's crop, 2 percentage points ahead of last year but equal to the 5-year average. By October 1, sugarbeet producers had harvested 15 percent of the Nation's crop, 3 percentage points behind last year and 8 percentage points behind the 5-year average.

By October 1, one percent of this year's sunflower crop was harvested, equal to last year but 2 percentage points behind the 5-year average.

### **Crop Comments**

**Corn**: The 2023 area harvested for grain, forecast at 87.1 million acres, is unchanged from the previous forecast but up 10 percent from last year.

The October 1 corn objective yield data indicate the highest number of ears on record for the combined objective yield States (Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Wisconsin).

Production for grain is forecast at 15.1 billion bushels, which if realized would be the third highest production for grain on record for the United States. Based on conditions as of October 1, the yield is forecast at 173.0 bushels per acre, down 0.4 bushel from last year's final estimate of 173.4 bushels. Record high yields are forecast in Alabama, Indiana, Ohio, and South Carolina.

By September 3, ninety-three percent of the corn acreage was at or beyond the dough stage, 2 percentage points ahead of last year and 1 percentage point ahead of the 5-year average. By September 3, sixty-seven percent of this year's corn acreage was denting, 6 percentage points ahead of last year and 2 percentage points ahead of the 5-year average. Eighteen percent of the Nation's corn acreage was mature by September 3, four percentage points ahead of last year and 2 percentage points ahead of the 5-year average.

By September 10, ninety-seven percent of the corn acreage was at or beyond the dough stage, 2 percentage points ahead of last year and 1 percentage point ahead of the 5-year average. By September 10, eighty-two percent of this year's corn acreage was denting, 7 percentage points ahead of last year and 4 percentage points ahead of the 5-year average. Thirty-four percent of the Nation's corn acreage was mature by September 10, ten percentage points ahead of last year and 6 percentage points ahead of the 5-year average. Five percent of the 2023 corn acreage was harvested by week's end, equal to last year but 1 percentage point ahead of the 5-year average harvest pace.

By September 17, ninety percent of this year's corn acreage was denting, 4 percentage points ahead of last year and 3 percentage points ahead of the 5-year average. Fifty-four percent of the corn acreage was mature by September 17, sixteen percentage points ahead of last year and 10 percentage points ahead of the 5-year average. Nine percent of the 2023 corn acreage was harvested by week's end, 2 percentage points ahead of both last year and the 5-year average harvest pace.

By September 24, ninety-five percent of this year's corn acreage was denting, 4 percentage points ahead of last year and 2 percentage points ahead of the 5-year average. Seventy percent of the Nation's corn was mature by September 24, fifteen percentage points ahead of last year and 10 percentage points ahead of the 5-year average. Fifteen percent of the 2023 corn acreage was harvested by September 24, four percentage points ahead of last year and 2 percentage points ahead of the 5-year average. On September 24, fifty-three percent of the Nation's corn was rated in good to excellent condition, 1 percentage point above the previous year.

Eighty-two percent of the Nation's corn acreage was mature by October 1, nine percentage points ahead of last year and 7 percentage points ahead of the 5-year average. Twenty-three percent of the 2023 corn acreage was harvested by week's end, 4 percentage points ahead of last year and 2 percentage points ahead of the 5-year average. On October 1, fifty-three percent of the Nation's corn acreage was rated in good to excellent condition, 1 percentage point above the previous year.

**Sorghum:** Area harvested for grain is forecast at 6.26 million acres, unchanged from the previous forecast but up 37 percent from 2022. Production is forecast at 360 million bushels, down 6 percent from the previous estimate but up 91 percent from last year. Based on September 1 conditions, yield is forecast at 57.4 bushels per acre, 16.3 bushels above the 2022 yield of 41.1 bushels per acre. If realized, South Dakota will have record high production along with a record high yield.

By October 1, seventy percent of the Nation's sorghum acreage was mature, 3 percentage points ahead of both last year and the 5-year average. Thirty-five percent of the 2023 sorghum acreage had been harvested by October 1, two percentage points ahead of last year and 1 percentage point ahead of the 5-year average. Eighty-five percent of Texas' sorghum acreage was harvested by October 1, five percentage points behind last year but 1 percentage point ahead of the 5-year average. Forty-one percent of the Nation's sorghum acreage was rated in good to excellent condition on October 1, one percentage point below the previous week but 21 percentage points above the previous year.

**Rice:** Production is forecast at 221 million cwt, down less than 1 percent from the previous forecast but up 38 percent from 2022. Area for harvest is expected to total 2.85 million acres, unchanged from the previous forecast but up 31 percent from last year. Based on conditions as of October 1, the United States yield is forecast at a record 7,737 pounds per acre, down 14 pounds per acre from the previous forecast but up 354 pounds per acre from 2022. All rice growing States are forecasted to have an increase in production from the previous year. The yield in Texas is also forecast to be a record high.

As of October 1, seventy-five percent of the rice acreage was harvested, 7 percentage points ahead of last year and 6 percentage points ahead of the 5-year average.

**Soybeans:** Production is forecast at 4.10 billion bushels, down 1 percent from the previous estimate and down 4 percent from last year. The forecasted yield, at 49.6 bushels per acre, is equal to last year's final estimate. Area harvested for beans in the United States is forecast at 82.8 million acres, unchanged from the previous forecast but down 4 percent from last year. Record high yields are forecast in Arkansas, Indiana, Mississippi, Ohio, and Tennessee.

The October objective yield data for the combined 11 major soybean-producing States (Arkansas, Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, Ohio, and South Dakota) indicate a higher pod count compared with the previous year. Compared with final counts for 2022, pod counts are up in 9 of the 11 published States. South Dakota showed the greatest increase, up 247 pods per 18 square feet from the previous year.

As of October 1, eighty-six percent of the United States soybean acreage was at or beyond the leaf dropping stage, 8 percentage points ahead of last year and 9 percentage points ahead of the 5-year average. Soybean harvest was 23 percent complete as of October 1, three percentage points ahead of last year and 1 percentage point ahead of the 5-year average. As of October 1, fifty-two percent of the Nation's soybean acreage was rated in good to excellent condition, 3 percentage points behind the same time last year.

**Sunflower:** The first production forecast for 2023 is 2.19 billion pounds, down 22 percent from the revised 2022 production of 2.81 billion pounds. Area planted, at 1.32 million acres, is down 2 percent from the June estimate and down 22 percent from last year. Sunflower growers expect to harvest 1.26 million acres, down 2 percent from the June forecast and down 21 percent from 2022. Acreage updates were made in several States based on a thorough review of all available data. The October yield forecast, at 1,738 pounds per acre, is 13 pounds lower than last year's yield but will still represent the third highest on record for the Nation, if realized.

The forecasted production in North Dakota, the leading sunflower-producing State this year, is 1.08 billion pounds, a decrease of 20 percent from 2022. Compared with last year, the average yield forecast of 1,938 pounds per acre in North Dakota is up 17 pounds. In South Dakota, the average yield is forecast at 1,668 pounds per acre, down 78 pounds from last year. The yield forecast in Minnesota and North Dakota will be the highest on record, if realized.

By the beginning of October, harvest was underway in 2 of the 4 estimating States published in the weekly *Crop Progress and Condition* report, with harvest not yet started in Colorado and North Dakota. As of October 1, one percent of the Nation's sunflower acreage was harvested, equal to last year's pace but 2 percentage points behind the 5-year average pace.

**Peanuts:** Production is forecast at 6.25 billion pounds in 2023, down 1 percent from the previous forecast, but up 13 percent from 2022. Area harvested is expected to total 1.60 million acres, unchanged from the previous forecast but up 16 percent from 2022. Based on conditions as of October 1, the average yield for the United States is forecast at 3,905 pounds per acre, down 48 pounds per acre from the previous forecast and down 103 pounds per acre from 2022.

The yield in South Carolina is forecast to be a record high. Sixteen percent of the Nation's peanut acreage was harvested as of October 1, ten percentage points behind last year and 6 points behind the 5-year average. On October 1, forty-eight percent of the Nation's peanut acreage was rated in good to excellent condition, 6 percentage points below the previous week and 17 percentage points below the previous year.

Canola: The first production forecast for 2023 is a record high 4.01 billion pounds, up 5 percent from the 2022 revised production of 3.82 billion pounds. Production in both North Dakota and Washington will be the highest on record, if realized. Meanwhile, the production in both Kansas and Oklahoma will be the lowest on record, if realized. Area planted for the Nation, at a record high 2.35 million acres, is up 3 percent from the June estimate and up 6 percent from last year's area. Canola farmers expect to harvest a record high 2.30 million acres, up 3 percent from June and up 6 percent from 2022. Acreage updates were made in several States based on a thorough review of all available data. The October yield forecast, at 1,741 pounds per acre, is 21 pounds below last year. The average yield forecast in both Montana and Washington are down 100 pounds per acre from last year's average yield in those States. Compared with 2022, the average yield in Minnesota is up 90 pounds per acre and will be the highest on record, if realized.

The yield in North Dakota, the largest canola-producing State, is forecast at 1,790 pounds per acre, down 30 pounds from last year's yield. Planted area in North Dakota is estimated at a record high 1.90 million acres, up 7 percent from last year. Planting of this year's canola crop in North Dakota progressed ahead of last year's pace but generally lagged behind the 5-year average pace. As of June 4, eighty-five percent of the crop had been planted, 23 percentage points ahead of last year's pace but equal to the 5-year average pace. Blooming of the canola crop began in late June. As of June 25, twenty-two percent of the canola acreage was at or past the blooming stage, 8 percentage points ahead of last year's pace and 2 percentage points ahead of the 5-year average pace. Maturation of the crop fell behind the 5-year average pace through July and into August. Harvest began in mid-August and progressed to 88 percent complete by October 1, two percentage points ahead of last year and 1 percentage point ahead of the 5-year average.

**Cotton:** Upland harvested area for the Nation is expected to total 7.88 million acres, unchanged from the previous forecast but up 10 percent from last year. Expected Pima harvested area at 141,100 acres is unchanged from the previous estimate but down 20 percent from last year. If realized, Upland harvested area for California and New Mexico would be a record low. A record low Upland production is forecasted for New Mexico. Arizona Pima is forecasted to be a record high yield.

By October 1, seventy-five percent of the Nation's cotton had open bolls, 1 percentage point behind last year but 2 percentage points ahead of the 5-year average. Advances of 10 percentage points or more from the previous week occurred in 9 of the 15 estimating States. By October 1, eighteen percent of the Nation's cotton acreage was harvested, 3 percentage points behind last year but 1 percentage point ahead of the 5-year average. On October 1, thirty percent of the 2023 cotton acreage was rated in good to excellent condition, equal to the previous week but 1 percentage point below the previous year.

Ginnings totaled 958,450 running bales prior to October 1, down from 1,083,700 running bales ginned prior to the same date last year.

**Alfalfa and alfalfa mixtures:** Production of alfalfa and alfalfa mixture dry hay for 2023 is forecast at 52.7 million tons, up 8 percent from the August forecast and up 10 percent from 2022. Based on October 1 conditions, yields are expected to average 3.37 tons per acre, up 0.24 ton from the August forecast and up 0.15 ton from last year. Harvested area is forecast at 15.7 million acres, unchanged from the *Acreage* report but up 5 percent from 2022. Record high yields are forecast for New Mexico and North Dakota.

**Other hay:** Production of other hay is forecast at 70.1 million tons, up less than 1 percent from the August forecast and up 8 percent from 2022. Based on October 1 conditions, the United States yield is expected to average 1.93 tons per acre, up 0.01 ton from the August forecast and up 0.06 ton from last year. Harvested area is forecast at 36.3 million acres, unchanged from the *Acreage* report but up 5 percent from 2022. Record high yields expected in Alabama, Georgia, Nebraska, North Dakota, and Wyoming.

Dry beans: Production of dry edible beans is forecast at 22.4 million cwt, down 1 percent from previous forecast and down 13 percent from 2022. Area planted is estimated at 1.18 million acres, down 4 percent from the August forecast and down 5 percent from 2022. Area harvested is forecast at 1.14 million acres, down 4 percent from the August forecast and down 7 percent from 2022. The yield is forecast at 1,962 pounds per acre, an increase of 63 pounds from the previous forecast but a decrease of 151 pounds from last season.

**Tobacco:** The 2023 United States all tobacco production is forecast at 429 million pounds, up 4 percent from the previous forecast but down 4 percent from 2022. Area harvested, at 190,590 acres, is down 1 percent from the previous month and down 6 percent from last year. Yield for the 2023 crop year is forecast at 2,253 pounds per acre, up 100 pounds from last month and 36 pounds above last year.

Sugarbeets: Production of sugarbeets for the 2023 crop year is forecast at 34.7 million tons, down 1 percent from last month but up 7 percent from last year. Producers expect to harvest 1.12 million acres, unchanged from last month but down 2 percent from last year. Yield is forecast at 31.1 tons per acre, down 0.4 ton from last month but up 2.5 tons from last year.

Sugarcane: Production of sugarcane for sugar and seed is forecast at 32.7 million tons, up 1 percent from the previous forecast but down 6 percent from last season. Producers intend to harvest 928,000 acres for sugar and seed during the 2023 crop year, up slightly from last month but down slightly from 2022. Yields for sugar and seed are expected to average 35.2 tons per acre, up 0.3 ton from last month but down 2.1 tons from last season.

Grapefruit: The United States 2023-2024 grapefruit crop is forecast at 309,000 tons, down 6 percent from last season's final utilization. The California forecast, at 3.50 million boxes (140,000 tons), is down 13 percent from the last season. The Florida forecast, at 1.90 million boxes (81,000 tons), is up 5 percent from the last season. The Texas forecast at 2.20 million boxes (88,000 tons), is down 2 percent from the 2022-2023 season.

Lemons: The 2023-2024 United States lemon crop is forecast at 980,000 tons, down 12 percent from last season's final utilization. The California forecast, at 23.0 million boxes (920,000 tons), is down 13 percent from the 2022-2023 season. The Arizona forecast, at 1.50 million boxes (60,000 tons), is up 7 percent from last year.

**Tangerines and mandarins:** The United States tangerine and mandarin crop is forecast at 944,000 tons, down 3 percent from last season's final utilization. The California tangerine and mandarin forecast, at 23.0 million boxes (920,000 tons), is down 3 percent from the previous year. The Florida tangerine and mandarin forecast, at 500,000 boxes (24,000 tons), is up 4 percent from last year.

**Pecans:** Production is forecast at 248 million pounds, down 11 percent from 2022. Improved varieties are expected to produce 234 million pounds or 94 percent of the total. The native and seedling varieties are expected to produce 13.8 million pounds, making up the remaining 6 percent of production.

#### Statistical Methodology

Field crop survey procedures: Objective yield and farm operator surveys were conducted between September 29 and October 5 to gather information on expected yield as of October 1. The objective yield surveys for corn, cotton, and soybeans were conducted in the major producing States that usually account for about 75 percent of the United States production. Randomly selected plots were revisited to make current counts. The counts made within each sample plot depend on the crop and the maturity of that crop. In all cases, plant counts are recorded along with other measurements that provide information to forecast the number of ears, bolls, or pods and their weight. The counts are used with similar data from previous years to develop a projected biological yield. The average harvesting loss is subtracted to obtain a net yield. The plots are visited starting in September and are revisited each month until crop maturity when the fruit is harvested and weighed. After the farm operator has harvested the sample field, another plot is sampled to obtain current year harvesting loss. Starting in 2019, NASS eliminated the August objective yield survey for cotton (except Texas), corn, and soybeans.

The farm operator survey was conducted primarily by telephone with some use of mail, internet, and personal interviewers. Approximately 7,800 producers were interviewed during the survey period and asked questions about probable yield. These growers will continue to be surveyed throughout the growing season to provide indications of average yields.

**Orange survey procedures:** In Florida, during August and September, the number of bearing trees and the number of fruit per tree is determined. In August and subsequent months, fruit size measurement and fruit droppage surveys are conducted, which combined with the previous components are used to develop the current forecast of production. California and Texas conduct grower surveys on a quarterly basis in October, January, April, and July. California also conducts objective measurement surveys in September for Navel oranges and in March for Valencia oranges.

**Field crop estimating procedures:** National and State level objective yield and grower reported data were reviewed for reasonableness and consistency with historical estimates. The survey data were also reviewed considering weather patterns and crop progress compared to previous months and previous years. Each Regional Field Office submits their analysis of the current situation to the Agricultural Statistics Board (ASB). The ASB uses the survey data and the State analyses to prepare the published October 1 forecasts.

**Orange estimating procedures:** State level objective measurement estimates for Florida oranges were reviewed for errors, reasonableness, and consistency with historical estimates. Reports from growers in California and Texas were also used for setting estimates. These three States submit their analyses of the current situation to the Agricultural Statistics Board (ASB). The ASB uses the survey data and the State analyses to prepare the published October 1 forecast.

**Revision policy:** The October 1 production forecast will not be revised; instead, a new forecast will be made each month throughout the growing season. End-of-season estimates are made after harvest. At the end of the marketing season, a balance sheet is calculated using carryover stocks, production, exports, millings, feeding, and ending stocks. Revisions are then made if the balance sheet relationships or other administrative data warrant changes. Estimates of acres for barley, oats, and wheat are subject to revision in the August Crop Production report. Acres for chickpeas, corn, cotton, dry edible peas, lentils, peanuts, rice, sorghum, soybeans, and sugarbeets are subject for revision in the September Crop Production report each year. Barley, oat, rye, and wheat end-of-season estimates are made in the Small Grains Annual report at the end of September. Canola, dry edible beans, and sunflower acres are subject to revision in the October Crop Production report. Potato acres are subject to revision in the November Crop Production report. End-of-season estimates for all other row crops are made in the Annual Crop Production Summary in January. Revisions to planted acres will only be made when either special survey data, administrative data, such as Farm Service Agency program "sign up" data, or remote sensing data are available. Harvested acres may be revised any time a production forecast is made if there is strong evidence that the intended harvested area has changed since the last forecast. End-of-season orange estimates will be published in August Citrus Fruits Summary. The orange production estimates are based on all data available at the end of the marketing season, including information from marketing orders, shipments, and processor records. Allowances are made for recorded local utilization and home use.

Reliability: To assist users in evaluating the reliability of the October 1 production forecast, the "Root Mean Square

Error," a statistical measure based on past performance, is computed. The deviation between the October 1 production forecast and the final estimate is expressed as a percentage of the final estimate. The average of the squared percentage deviations for the latest 20-year period is computed. The square root of the average becomes statistically the "Root Mean Square Error." Probability statements can be made concerning expected differences in the current forecast relative to the final end-of-season estimate, assuming that factors affecting this year's forecast are not different from those influencing recent years. For example, the "Root Mean Square Error" for the October 1 corn for grain production forecast is 1.9 percent. This means that chances are 2 out of 3 that the current production forecast will not be above or below the final estimate by more than 1.9 percent. Chances are 9 out of 10 (90 percent confidence level) that the difference will not exceed 3.4 percent.

Also, shown in the following table is a 20-year record for selected crops of the differences between the October 1 forecast and the final estimate. Using corn again as an example, changes between the October 1 forecast and the final estimate during the last 20 years have averaged 203 million bushels, ranging from 10 million bushels to 610 million bushels. The October 1 forecast has been below the final estimate 9 times and above 10 times. This does not imply that the October 1 corn forecast this year is likely to understate or overstate final production.

## **Reliability of October 1 Crop Production Forecasts**

[Based on data for the past twenty years]

Crop	Root mean square error	90 percent confidence interval	Difference between forecast and final estimate				
			Production			Years	
			Average	Smallest	Largest	Below final	Above final
	(percent)	(percent)	(millions)	(millions)	(millions)	(number)	(number)
Corn for grain bushels Hay	1.9	3.4	203	10	610	9	10
Alfalfatons	5.1	8.8	2	(Z)	7	4	15
Othertons	4.1	7.1	3	(Z)	6	3	16
Oranges <sup>1</sup> tons	10.3	17.8	452	2	1,676	2	17
Peanut <sup>1</sup> pounds	6.0	10.4	269	16	729	11	8
Ricecwt	1.9	3.3	3	(Z)	12	11	8
Sorghum for grain bushels	8.5	14.8	16	2	57	9	10
Soybeans for beans bushels	2.4	4.2	59	1	261	13	6
Sugarbeets for sugartons	5.2	9.0	1	(Z)	5	8	11
Sugarcanetons	6.0	10.4	2	(Z)	4	10	9
Upland cotton <sup>1</sup> bales	6.8	11.7	939	76	2,439	8	11

<sup>(</sup>Z) Less than half of the unit shown.

1 Quantity is in thousands of units.

## **USDA**, National Agricultural Statistics Service Information Contacts

Listed below are the commodity statisticians in the Crops Branch of the National Agricultural Statistics Service to contact for additional information. E-mail inquiries may be sent to nass@usda.gov

Lance Honig, Chief, Crops Branch	(202) 720-2127
Chris Hawthorn, Head, Field Crops Section	(202) 720-2127
Irwin Anolik – Crop Progress and Condition	
Joshua Bates – Hemp, Oats, Soybeans	
Natasha Bruton - Barley, Cotton System Consumption and Stocks, Grain Crushings	
David Colwell – Fats and Oils, Flour Milling Products	(202) 720-8800
Michelle Harder – County Estimates, Hay	(202) 690-8533
James Johanson – Rye, Wheat	
Greg Lemmons – Corn, Flaxseed, Proso Millet	
Becky Sommer – Cotton, Cotton Ginnings, Sorghum	
Travis Thorson – Sunflower, Other Oilseeds	
Jennifer Van Court – Peanuts, Rice	(202) 720-2127
Fleming Gibson, Head, Fruits, Vegetables and Special Crops Section	(202) 720-2127
Plums, Prunes, Tobacco	(202) 720-4288
Bret Holliman – Apricots, Chickpeas, Nectarines, Peaches, Snap Beans,	,
Sweet Corn, Tomatoes	(202) 720-7235
Robert Little - Blueberries, Cabbage, Dry Beans, Lettuce, Macadamia,	
Maple Syrup, Pears, Raspberries, Spinach	(202) 720-3250
Krishna Rizal – Artichokes, Asparagus, Celery, Grapefruit, Kiwifruit, Lemons,	
Mandarins and tangerines, Mint, Mushrooms, Olives, Oranges, Pistachios	(202) 720-5412
Chris Singh – Apples, Cucumbers, Hazelnuts, Potatoes, Pumpkins,	
Squash, Strawberries, Sugarbeets, Sugarcane, Sweet Potatoes	(202) 720-4285
Antonio Torres – Cantaloupes, Dry Edible Peas, Grapes, Green Peas,	
Honeydews, Lentils, Sweet Cherries, Tart Cherries, Walnuts, Watermelons	(202) 720-2157
Chris Wallace – Avocados, Bell Peppers, Broccoli, Cauliflower,	
Chile Peppers, Dates, Floriculture, Hops, Papayas, Pecans	(202) 720-4215

#### **Access to NASS Reports**

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site: www.nass.usda.gov.
- ➤ Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <a href="www.nass.usda.gov">www.nass.usda.gov</a> and click on "National" or "State" in upper right corner above "search" box to create an account and select the reports you would like to receive.
- Cornell's Mann Library has launched a new website housing NASS's and other agency's archived reports. The new website, <a href="https://usda.library.cornell.edu">https://usda.library.cornell.edu</a>. All email subscriptions containing reports will be sent from the new website, <a href="https://usda.library.cornell.edu">https://usda.library.cornell.edu</a>. To continue receiving the reports via e-mail, you will have to go to the new website, create a new account and re-subscribe to the reports. If you need instructions to set up an account or subscribe, they are located at: <a href="https://usda.library.cornell.edu/help">https://usda.library.cornell.edu/help</a>. You should whitelist <a href="motifications@usda-esmis.library.cornell.edu">notifications@usda-esmis.library.cornell.edu</a> in your email client to avoid the emails going into spam/junk folders.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@usda.gov.

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the basis of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file a Civil Rights program complaint of discrimination, complete the <u>USDA Program Discrimination</u> <u>Complaint Form</u> (PDF), found online at <u>www.ascr.usda.gov/filing-program-discrimination-complaint-usda-customer</u>, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at <u>program.intake@usda.gov</u>.

# USDA Fall Data Users' Meeting Virtual Meeting October 17 & 18, 2023 12:00 – 3:00 pm ET

USDA's National Agricultural Statistics Service (NASS) will hold a virtual meeting for users of U.S. domestic and international agriculture data. NASS is organizing the 2023 Fall Data Users' Meeting in cooperation with five other USDA agencies – Agricultural Marketing Service, Economic Research Service, Farm Service Agency, Foreign Agricultural Service, and World Agricultural Outlook Board – and the Census Bureau's Foreign Trade Division. Representatives will provide agency updates, answer questions, and listen to concerns from data users.

### **Abbreviated Agenda**

### Day 1 – October 17

Agency Updates-All agencies

Focus on the 2022 Census of Agriculture - *National Agricultural Statistics Service*The Use of Weather Information In Producing the WASDE - *World Agricultural Outlook Board*NASS Historical Revisions and Estimating Program Review - *National Agricultural Statistics Service*AMS Data Visualizations - *Agricultural Marketing Service* 

## Day 2 – October 18

Open Forum – *All agencies* 

ERS Feed Grains Database: A comprehensive look at this valuable resource – *Economic Research Service* Understanding Publicly Available Data from USDA-Risk Management Agency – *Risk Management Agency* 

For registration details or additional information about the Data Users' Meeting, see the meeting page on the NASS website (https://www.nass.usda.gov/go/data\_users).
