REUSABLE FACE VISORS

This protective visor provides full-face protection against airborne droplets, while allowing unrestricted visibility.

The lightweight unisex design is easy to assemble and incorporates a fully adjustable headband with foam padding, for a comfortable fit, with or without glasses or a face mask. Sanitise after every use.

Foam headband provides a secure, comfortable fit and allows space for eyewear and facemasks.

100% PET and fully recyclable.

Full face PET shield offers protection against splashes and airborne droplets.

Anti-fog prevents visor from steaming up in use, providing unrestricted visibility.

Available in two sizes, the visor is fully adjustable, easy to clean and includes anti-mist to prevent fogging during use.

The visor screen is manufactured from high clarity PET material, which is 100% recyclable.

28442 Medium Visor 1x25 - £149.50

Head Circumference 47-61cm

Dimensions 750 x 250mm

96960 Large Visor 1x25 - £162.50

Head Circumference 51cm–68cm

Dimensions 750 x 270mm

DISPOSABLE FACE MASKS

THERMAL TEMPERATURE SCREENING

HELPING TO SAFEGUARD CUSTOMERS, STAFF AND THE COMMUNITY

The Thermal Temperature NOW Monitoring Solution is capable of identifying individuals with an elevated temperature.

With a built-in AI algorithm, it can monitor multiple people from a distance of 9.8 feet away and 4.3 feet wide, enabling fast assessment without personal contact.

Monitors temperature even when people use face accessories and headwear. And rejects false positives like hot drinks.

COVID-19 DISINFECTION

KITCHEN MASTER PRODUCTS

A huge amount of international research is being carried out to understand the origin, spread and effective treatment of the coronavirus strain known as COVID-19. As a relatively new virus, there are no disinfectant products that have been specifically tested against COVID-19, but there is high confidence that products that are effective against similar types of corona virus will also be effective against COVID-19.

The Kitchen Master product **Bactivir** is made to a formulation that has been approved the US EPA (Reg No. 1839-83) and has been shown to be effective against viruses including Human Coronavirus and SARS when **used neat as supplied with a 2min contact time**.

The current CDC guidance (in [section 7](#)) states that products that have demonstrated effectiveness against viruses similar to COVID-19..... can be used against COVID-19 when used following the directions for (Human Coronavirus).....

Reference: <https://www.cdc.gov/coronavirus/2019-nCoV/hcp/infection-control.html>

The governments of several countries that have experienced an outbreak of COVID-19, including Singapore, are advising the use of disinfectant products containing specific active biocidal ingredients, where there is a risk of COVID-19.

The Singapore National Environment Agency in consultation with the Ministry of Health has issued guidelines for products and active biocidal ingredients that can be used where COVID-19 is present.

The recommendations include the biocidal ingredients:

Benzalkonium chloride (at 0.05% concentration) and Sodium Hypochlorite (Bleach)

Reference: <https://www.nea.gov.sg/our-services/public-cleanliness/environmental-cleaning-guidelines/guidelines/interim-list-of-household-products-and-active-ingredients-for-disinfection-of-covid-19>

Although liquid sodium hypochlorite products are readily available, they are not always suitable for use as they can be damaging to many surfaces and can have a reduced shelf-life. Products containing Benzalkonium chloride (such as Kitchen Master **Reload 1**, **Reload 5**, **601** and **605**) are safe to use on almost all washable surfaces.

To meet the published Singapore guidelines for COVID-19 in terms of meeting or exceeding the 0.05% Benzalkonium chloride threshold for disinfection, the following product dilutions are advised:

Reload No 1	(dilute up to 25:1)
Reload No 5	(dilute up to 100:1)
Surface Sanitizer 601	(dilute up to 7:1)
Surface Sanitizer 605	(dilute up to 15:1)
Surface Sanitiser 802	(dilute up to 10:1)
Sanitiser	(Ready to Use)

At these dilutions, the above Kitchen Master product comply with the guidelines issued by the Singapore Govt and are supported by the respected [Journal of Hospital Infection](#) publication (see reference below) who advise a contact time of **10 minutes** for effective virucidal action.

[https://www.journalofhospitalinfection.com/article/S0195-6701\(20\)30046-3/fulltext](https://www.journalofhospitalinfection.com/article/S0195-6701(20)30046-3/fulltext)

Note: The Journal of Hospital Infection also provide information that the active biocide used in **Surface Sanitiser 802** (Didecylmethyl ammonium chloride) will also be highly effective against COVID-19 but lacks test data to effectively demonstrate action with a short contact time.
