

## COMPETITION WEAVE POLE SET – Info & Specs – July 2021

The world's safest and sturdiest regulation equipment weave pole set!

Perfect for 2x2 training, as well as regulation equipment. Made to last a lifetime!

WHAT's NEW in 2021:

1. **Pole supports.** Now a separate part, with attachment bolt and lock washer (attaching from beneath the base). The new pole supports replace our previously welded pole supports that occasionally broke under the impact of a strong weaver. They also allow for easier and less expensive shipping, and if needed, a quick-and-easy replacement support.
2. **Stake holes.** Now machined so that stake (or Powerlag screw) heads nestle into the top of each leg. The profile is virtually flat when using stakes or Powerlag screws, with minimal hardware sticking up above the leg. When not staking down, use our supplied safety caps for sealing the stake holes; caps cover the bottom part of each stake hole, making the side support legs safer for paws.
3. **Side support legs.** Now with 11" length. Previous versions were 9.5" length.
4. **Connector-weights.** Screw holes are now slightly countersunk to make screws easier to insert and to make connector-weights hold tighter to the base. The word 'UP' is engraved to make sure you orient the countersunk side to face the bottom of the base.

The only Competition weaves that do all this:

- Non-skid running surface with gently rounded edges, no sharp 90-degree corners
- Completely flat base with no protruding hardware that could injure your dogs
- Low-profile side support legs, solid, sturdy and safe, half the height of the base itself
- 2-pole units with 3/8" thick connector-weights (2 screws each) hidden below the running surface
- Stabilize your bases with choice of 8", 16" or 20" connector-weights
- Non-welded pole supports for robust reliability, less expensive shipping, and, if needed, a quick-and-easy replacement
- Safely truncated at the ends (no 'tail' before pole #1 or after pole #12)
- Stake holes in legs are counterbored, so stake (or Powerlag screw) heads are flush with surface
- Plastic plugs for stake holes when staking is not an option; safer for paws
- Non-skid powdercoated steel bases and connector-weights, stainless steel screws
- Texture is included in the powdercoating process, not added on top of paint

Each 12-pole set includes:

(6) 2-pole bases (4 midsections and 2 end units), (5) connector/weights, (10) screws and #4 Phillips head bit [PVC poles sold separately]

Choice of base colors with matching screw heads: Stone wheat or Thunder blue

All our weave pole products have 24" spacing between poles. This product is used regularly by many agility clubs and organizations. Excellent choice for both outdoor and indoor venues.

Base's inverted U-channel design allows connector-weights to be completely hidden from view.

## Features

- Approved and used in official trials, AKC, USDAA etc.
- Recommended by NADAC because of stability, without the need of staking
- Ideal for all stages of 2x2 training
- Easily moveable to different parts of the course (remove only 1 screw to break 12-pole set into 6-pole sections)
- Base made from steel with powdercoated non-skid surface (non-skid included in powdercoat)
- Base color choice: Stone wheat or Thunder blue (with matching connector screw heads)
- Side support legs: lower profile than base, solid steel with gently rounded edges
- Connector-weights for attaching units together, customizing weight of set
- Quality and safety checks at every stage of manufacturing
- Furniture-grade, UV stabilized, shatter resistant PVC poles in 7 colors [sold separately]

## Specs

- 24" pole spacing
- Base and legs: fabricated/machined steel, powdercoated with non-skid, textured powder
- (4) full base units, (2) shortened base units (one short unit at each end of a 12-pole set)
- Full (midsection) base unit length each: 4'
- Shortened (end) base unit length each: 37"
- Total length: 22'2"
- Base width: 2"
- Base height: 1/2"
- Leg width: 1-1/2"
- Leg height: 1/4"
- Leg length: 11"
- Stake holes in legs: 7/16" diameter to fit 3/8" spikes and Powerlag screws
- Stake holes counterbored to 1" diameter; 3/8" spike (and Powerlags screw) heads will nestle inside counterbore
- Support post height: 4" above ground (3-1/2" above base)
- Rigid steel connector-weights with (2) screw holes each
- Short connector-weights: Blue powdercoat
- Long and ExtraLong connector-weights: Wheat textured powdercoat
- Short/Long/ExtraLong connector-weight lengths: 8"/16"/20"
- Short/Long/ExtraLong connector-weight weights: 1.3 pounds/2.6 pounds/3.2 pounds each
- Connector-weight width: 1-1/2"
- Connector-weight thickness: 3/8"
- Connector-weight screws: stainless steel 5/16"-18 x 1/2" #4 Phillips head, heads painted to match base color
- Includes #4 Phillips head bit with 1/4" hex drive (for connector-weight screws)
- Custom-designed sets available

See our [article](#) on weave pole training methods for an overview of equipment available, plus other advice for beginners.

Approved for AKC, USDAA, etc. Recommended by NADAC because of stability without staking.

Made in USA
