

Ladybird

Moving mini beasts

Cut along the dotted lines and around the shape of the mini beast's body.

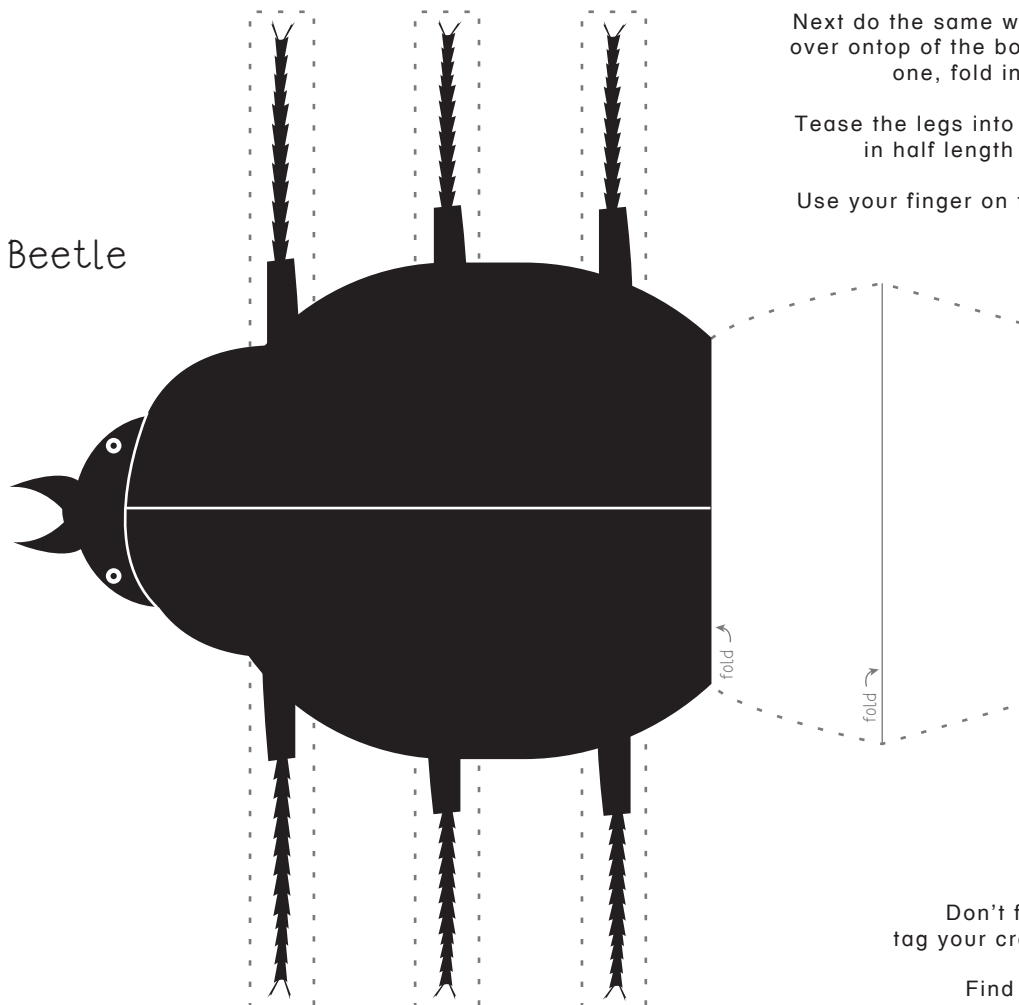

Fold the flap under the mini beast and then fold the flap in half (along the line_ in the opposite direction to create a small concertina shape.

Next do the same with each of the legs, first folding over on top of the body and then half way down each one, fold in the opposite direction.

Tease the legs into position and finally fold the bug in half length ways and open out again.

Use your finger on the back to make the bug 'jump' and move.

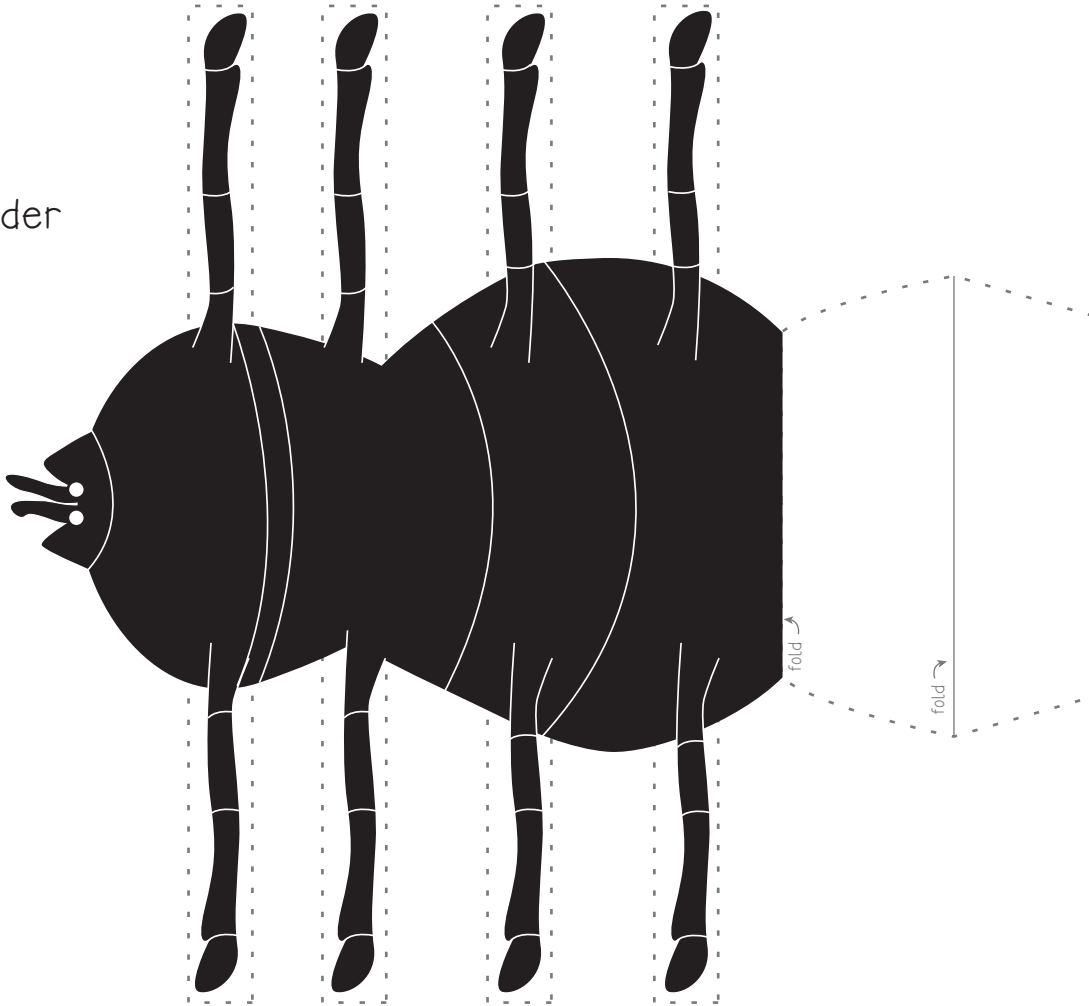

Beetle
